ZEO SUSTAINABLE CREDIT FUND

Class I shares: ZSRIX

Each a Series of Northern Lights Fund Trust

STATEMENT OF ADDITIONAL INFORMATION

August 28, 2021

This Statement of Additional Information ("SAI") is not a prospectus and should be read in conjunction with the Prospectus of the Zeo Short Duration Income Fund and Zeo Sustainable Credit Fund (each a Fund, collectively referred to as the "Funds") dated August 28, 2021. The Funds' Prospectus is hereby incorporated by reference, which means it is legally part of this SAI. You can obtain copies of the Funds' Prospectus, and when first produced, annual or semiannual reports without charge by contacting the Funds' transfer agent, Gemini Fund Services, LLC, 4221 North 203rd Street, Suite 100, Elkhorn, Nebraska 68022-3474 or by calling 1-855-936-3863.

THE FUNDS

Zeo Short Duration Income Fund ("Short Duration") and Zeo Sustainable Credit Fund ("Sustainable Credit"), each a series of Northern Lights Fund Trust, a Delaware statutory trust organized on January 19, 2005 (the "Trust"). The Trust is registered as an open-end management investment company. The Trust is governed by its Board of Trustees (the "Board" or "Trustees").

Each Fund may issue an unlimited number of shares of beneficial interest. All shares of the Funds have equal rights and privileges. Each share of a Fund is entitled to one vote on all matters as to which shares are entitled to vote. In addition, each share of a Fund is entitled to participate in its proportionate share with other shares (i) in dividends and distributions declared by a Fund and (ii) on liquidation, to its proportionate share of the assets remaining after satisfaction of outstanding liabilities. Shares of the Funds are fully paid, non-assessable and fully transferable when issued and have no pre-emptive, conversion or exchange rights. Fractional shares have proportionately the same rights, including voting rights, as are provided for a full share.

Each Fund's investment objective, restrictions and policies are more fully described here and in the Prospectus. The Board may add classes to the Funds, start other series and offer shares of a new fund under the Trust at any time. Zeo Capital Advisors, LLC (the "Adviser") is the Funds' investment adviser.

Short Duration has and may offer two classes of shares: Class A shares and Class I shares. Class A shares are not currently available for sale. Sustainable Credit currently offers Class I shares for sale. Each share class represents an interest in the same assets of the Funds, has the same rights and is identical in all material respects except that (i) each class of shares may be subject to different (or no) sales loads, (ii) each class of shares may bear different (or no) distribution fees; (iii) each class of shares may have different shareholder features, such as minimum investment amounts; (iv) certain other class-specific expenses will be borne solely by the class to which such expenses are attributable, including transfer agent fees attributable to a specific class of shares, printing and postage expenses related to preparing and distributing materials to current shareholders of a specific class, registration fees paid by a specific class of shares, the expenses of administrative personnel and services required to support the shareholders of a specific class, litigation or other legal expenses relating to a class of shares, Trustees' fees or expenses paid as a result of issues relating to a specific class of shares and accounting fees and expenses relating to a specific class of shares and (v) each class has exclusive voting rights with respect to matters relating to its own distribution arrangements. The Board of Trustees may classify and reclassify the shares of each Fund into additional classes of shares at a future date.

Under the Trust's Agreement and Declaration of Trust, each Trustee will continue in office until the termination of the Trust or his/her earlier death, incapacity, resignation or removal. Shareholders can remove a Trustee to the extent provided by the Investment Company Act of 1940, as amended (the "1940 Act") and the rules and regulations promulgated thereunder. Vacancies may be filled by a majority of the remaining Trustees, except insofar as the 1940 Act may require the election by shareholders. As a result, normally no annual or regular meetings of shareholders will be held unless matters arise requiring a vote of shareholders under the Agreement and Declaration of Trust or the 1940 Act.

TYPES OF INVESTMENTS

The investment objective of each Fund and a description of its principal investment strategies are set forth under each "Fund Summary" in the Prospectus. Each Fund's investment objective is not "fundamental" and may be changed without the approval of a majority of its outstanding voting securities, however, shareholders will be given at least 60 days' notice of such a change.

The following information describes securities in which the Funds may invest and their related risks.

EQUITY SECURITIES

Equity securities include common stock and securities convertible into common stocks, such as convertible bonds, warrants, rights and options. The value of equity securities varies in response to many factors, including the activities and financial condition of individual companies, the business market in which individual companies compete and general market and

economic conditions. Equity securities fluctuate in value, often based on factors unrelated to the value of the issuer of the securities, and such fluctuations can be significant.

Common Stock

Common stock represents an equity (ownership) interest in a company, and usually possesses voting rights and earns dividends. Dividends on common stock are not fixed but are declared at the discretion of the issuer. Common stock generally represents the riskiest investment in a company. In addition, common stock generally has the greatest appreciation and depreciation potential because increases and decreases in earnings are usually reflected in a company's stock price.

The fundamental risk of investing in common and preferred stock is the risk that the value of the stock might decrease. Stock values fluctuate in response to the activities of an individual company or in response to general market and/or economic conditions. Historically, common stocks have provided greater long-term returns and have entailed greater short-term risks than preferred stocks, fixed-income securities and money market investments. The market value of all securities, including common and preferred stocks, is based upon the market's perception of value and not necessarily the book value of an issuer or other objective measures of a company's worth.

Convertible Securities

Each Fund may invest in convertible securities and non-investment grade convertible securities. Convertible securities include fixed income securities that may be exchanged or converted into a predetermined number of shares of the issuer's underlying common stock at the option of the holder during a specified period. Convertible securities may take the form of convertible preferred stock, convertible bonds or debentures, units consisting of "usable" bonds and warrants or a combination of the features of several of these securities. Convertible securities are senior to common stocks in an issuer's capital structure, but are usually subordinated to similar non-convertible securities. While providing a fixed-income stream (generally higher in yield than the income derivable from common stock but lower than that afforded by a similar nonconvertible security), a convertible security also gives an investor the opportunity, through its conversion feature, to participate in the capital appreciation of the issuing company depending upon a market price advance in the convertible security's underlying common stock.

Income Trusts

Each Fund may invest in income trusts which are investment trusts that hold assets that are income producing. The income is passed on to the "unitholders." Each income trust has an operating risk based on its underlying business. The term may also be used to designate a legal entity, capital structure and ownership vehicle for certain assets or businesses. Shares or "trust units" are traded on securities exchanges just like stocks. Income is passed on to the investors, called unitholders, through monthly or quarterly distributions. Historically, distributions have typically been higher than dividends on common stocks. The unitholders are the beneficiaries of a trust, and their units represent their right to participate in the income and capital of the trust. Income trusts generally invest funds in assets that provide a return to the trust and its beneficiaries based on the cash flows of an underlying business. This return is often achieved through the acquisition by the trust of equity and debt instruments, royalty interests or real properties. The trust can receive interest, royalty or lease payments from an operating entity carrying on a business, as well as dividends and a return of capital.

Each income trust has an operating risk based on its underlying business; and, typically, the higher the yield, the higher the risk. They also have additional risk factors, including, but not limited to, poorer access to debt markets. Similar to a dividend paying stock, income trusts do not guarantee minimum distributions or even return of capital. If the business starts to lose money, the trust can reduce or even eliminate distributions; this is usually accompanied by sharp losses in a unit's market value. Since the yield is one of the main attractions of income trusts, there is the risk that trust units will decline in value if interest rates offering in competing markets, such as in the cash/treasury market, increase. Interest rate risk is also present within the trusts themselves because they hold very long term capital assets (e.g. pipelines, power plants, etc.), and much of the excess distributable income is derived from a maturity (or duration) mismatch between the life of the asset, and the life of the financing associated with it. In an increasing interest rate environment, not only does the attractiveness of trust distributions decrease, but quite possibly, the distributions may themselves decrease, leading to a double whammy of both declining yield and substantial loss of unitholder value. Because most income is passed on to unitholders, rather than reinvested in the business, in some cases, a trust can become a wasting asset unless more equity is issued. Because many income trusts pay out more than

their net income, the unitholder equity (capital) may decline over time. To the extent that the value of the trust is driven by the deferral or reduction of tax, any change in government tax regulations to remove the benefit will reduce the value of the trusts. Generally, income trusts also carry the same risks as dividend paying stocks that are traded on stock markets.

Publicly Traded Partnerships

Each Fund may invest in publicly traded partnerships ("PTPs"). PTPs are limited partnerships the interests in which (known as "units") are traded on public exchanges, just like corporate stock. PTPs are limited partnerships that provide an investor with a direct interest in a group of assets (generally, oil and gas properties). Publicly traded partnership units typically trade publicly, like stock, and thus may provide the investor more liquidity than ordinary limited partnerships. Publicly traded partnerships are also called master limited partnerships and public limited partnerships. A limited partnership has one or more general partners (they may be individuals, corporations, partnerships or another entity) which manage the partnership, and limited partners, which provide capital to the partnership but have no role in its management. When an investor buys units in a PTP, he or she becomes a limited partner. PTPs are formed in several ways. A non-traded partnership may decide to go public. Several non-traded partnerships may "roll up" into a single PTP. A corporation may spin off a group of assets or part of its business into a PTP of which it is the general partner, either to realize what it believes to be the assets' full value or as an alternative to issuing debt. A corporation may fully convert to a PTP, although since 1986 the tax consequences have made this an unappealing; or, a newly formed company may operate as a PTP from its inception.

There are different types of risks to investing in PTPs including regulatory risks and interest rate risks. Currently most partnerships enjoy pass through taxation of their income to partners, which avoids double taxation of earnings. If the government were to change PTP business tax structure, unitholders would not be able to enjoy the relatively high yields in the sector for long. In addition, PTPs which charge government-regulated fees for transportation of oil and gas products through their pipelines are subject to unfavorable changes in government-approved rates and fees, which would affect a PTPs revenue stream negatively. PTPs also carry some interest rate risks. During increases in interest rates, PTPs may not produce decent returns to shareholders.

Real Estate Investment Trusts

Each Fund may invest in securities of real estate investment trusts ("REITs"). REITs are publicly traded corporations or trusts that specialize in acquiring, holding and managing residential, commercial or industrial real estate. A REIT is not taxed at the entity level on income distributed to its shareholders or unitholders if it distributes to shareholders or unitholders at least 95% of its taxable income for each taxable year and complies with regulatory requirements relating to its organization, ownership, assets and income.

REITs generally can be classified as "Equity REITs," "Mortgage REITs" and "Hybrid REITs." An Equity REIT invests the majority of its assets directly in real property and derives its income primarily from rents and from capital gains on real estate appreciation, which are realized through property sales. A Mortgage REIT invests the majority of its assets in real estate mortgage loans and services its income primarily from interest payments. A Hybrid REIT combines the characteristics of an Equity REIT and a Mortgage REIT. Although each Fund can invest in all three kinds of REITs, its emphasis is expected to be on investments in Equity REITs.

Investments in the real estate industry involve particular risks. The real estate industry has been subject to substantial fluctuations and declines on a local, regional and national basis in the past and may continue to be in the future. Real property values and income from real property continue to be in the future. Real property values and income from real property may decline due to general and local economic conditions, overbuilding and increased competition, increases in property taxes and operating expenses, changes in zoning laws, casualty or condemnation losses, regulatory limitations on rents, changes in neighborhoods and in demographics, increases in market interest rates, or other factors. Factors such as these may adversely affect companies that own and operate real estate directly, companies that lend to such companies, and companies that service the real estate industry.

Investments in REITs also involve risks. Equity REITs will be affected by changes in the values of and income from the properties they own, while Mortgage REITs may be affected by the credit quality of the mortgage loans they hold. In addition, REITs are dependent on specialized management skills and on their ability to generate cash flow for operating purposes and to make distributions to shareholders or unitholders REITs may have limited diversification and are subject to risks associated with obtaining financing for real property, as well as to the risk of self-liquidation. REITs also can be adversely affected by their failure

to qualify for tax-free pass-through treatment of their income under the Internal Revenue Code of 1986, as amended, or their failure to maintain an exemption from registration under the 1940 Act. By investing in REITs indirectly through a Fund, a shareholder bears not only a proportionate share of the expenses of a Fund, but also may indirectly bear similar expenses of some of the REITs in which it invests.

Warrants

Each Fund may invest in warrants. Warrants are options to purchase common stock at a specific price (usually at a premium above the market value of the optioned common stock at issuance) valid for a specific period of time. Warrants may have a life ranging from less than one year to twenty years, or they may be perpetual. However, most warrants have expiration dates after which they are worthless. In addition, a warrant is worthless if the market price of the common stock does not exceed the warrant's exercise price during the life of the warrant. Warrants have no voting rights, pay no dividends, and have no rights with respect to the assets of the corporation issuing them. The percentage increase or decrease in the market price of the warrant may tend to be greater than the percentage increase or decrease in the market price of the optioned common stock.

DERIVATIVES

Futures Contracts

A futures contract provides for the future sale by one party and purchase by another party of a specified amount of a specific financial instrument (e.g., units of a stock index) for a specified price, date, time and place designated at the time the contract is made. Brokerage fees are incurred when a futures contract is bought or sold and margin deposits must be maintained. Entering into a contract to buy is commonly referred to as buying or purchasing a contract or holding a long position. Entering into a contract to sell is commonly referred to as selling a contract or holding a short position.

Unlike when a Fund purchases or sells a security, no price would be paid or received by a Fund upon the purchase or sale of a futures contract. Upon entering into a futures contract, and to maintain a Fund's open positions in futures contracts, a Fund would be required to deposit with its custodian or futures broker in a segregated account in the name of the futures broker an amount of cash, U.S. government securities, suitable money market instruments, or other liquid securities, known as "initial margin." The margin required for a particular futures contract is set by the exchange on which the contract is traded, and may be significantly modified from time to time by the exchange during the term of the contract. Futures contracts are customarily purchased and sold on margins that may range upward from less than 5% of the value of the contract being traded.

If the price of an open futures contract changes (by increase in underlying instrument or index in the case of a sale or by decrease in the case of a purchase) so that the loss on the futures contract reaches a point at which the margin on deposit does not satisfy margin requirements, the broker will require an increase in the margin. However, if the value of a position increases because of favorable price changes in the futures contract so that the margin deposit exceeds the required margin, the broker will pay the excess to a Fund.

These subsequent payments, called "variation margin," to and from the futures broker, are made on a daily basis as the price of the underlying assets fluctuate making the long and short positions in the futures contract more or less valuable, a process known as "marking to the market." Each Fund expects to earn interest income on its margin deposits.

Although certain futures contracts, by their terms, require actual future delivery of and payment for the underlying instruments, in practice most futures contracts are usually closed out before the delivery date. Closing out an open futures contract purchase or sale is effected by entering into an offsetting futures contract sale or purchase, respectively, for the same aggregate amount of the identical underlying instrument or index and the same delivery date. If the offsetting purchase price is less than the original sale price, a Fund realizes a gain; if it is more, a Fund realizes a loss. Conversely, if the offsetting sale price is more than the original purchase price, a Fund realizes a gain; if it is less, a Fund realizes a loss. The transaction costs must also be included in these calculations. There can be no assurance, however, that a Fund will be able to enter into an offsetting transaction with respect to a particular futures contract at a particular time. If a Fund is not able to enter into an offsetting transaction, each Fund will continue to be required to maintain the margin deposits on the futures contract.

For example, one contract in the Financial Times Stock Exchange 100 Index future is a contract to buy 25 pounds sterling multiplied by the level of the UK Financial Times 100 Share Index on a given future date. Settlement of a stock index futures contract may or may not be in the underlying instrument or index. If not in the underlying instrument or index, then settlement

will be made in cash, equivalent over time to the difference between the contract price and the actual price of the underlying asset at the time the stock index futures contract expires.

Options on Futures Contracts

Each Fund may purchase and sell options on the same types of futures in which it may invest. Options on futures are similar to options on underlying instruments except that options on futures give the purchaser the right, in return for the premium paid, to assume a position in a futures contract (a long position if the option is a call and a short position if the option is a put), rather than to purchase or sell the futures contract, at a specified exercise price at any time during the period of the option. Upon exercise of the option, the delivery of the futures position by the writer of the option to the holder of the option will be accompanied by the delivery of the accumulated balance in the writer's futures margin account which represents the amount by which the market price of the futures contract, at exercise, exceeds (in the case of a call) or is less than (in the case of a put) the exercise price of the option on the futures contract. Purchasers of options who fail to exercise their options prior to the exercise date suffer a loss of the premium paid.

Regulation as a Commodity Pool Operator

The Adviser, on behalf of each Fund, has filed with the National Futures Association, a notice claiming an exclusion from the definition of the term "commodity pool operator" under the Commodity Exchange Act, as amended, and the rules of the Commodity Futures Trading Commission promulgated thereunder, with respect to each Fund's operations. Accordingly, each Fund is not subject to registration or regulation as a commodity pool operator.

Options on Securities

Each Fund may purchase and write (*i.e.*, sell) put and call options. Such options may relate to particular securities or stock indices and may or may not be listed on a domestic or foreign securities exchange and may or may not be issued by the Options Clearing Corporation. Options trading is a highly specialized activity that entails greater than ordinary investment risk. Options may be more volatile than the underlying instruments, and therefore, on a percentage basis, an investment in options may be subject to greater fluctuation than an investment in the underlying instruments themselves.

A call option for a particular security gives the purchaser of the option the right to buy, and the writer (seller) the obligation to sell, the underlying security at the stated exercise price at any time prior to the expiration of the option, regardless of the market price of the security. The premium paid to the writer is in consideration for undertaking the obligation under the option contract. A put option for a particular security gives the purchaser the right to sell the security at the stated exercise price at any time prior to the expiration date of the option, regardless of the market price of the security.

Stock index options are put options and call options on various stock indices. In most respects, they are identical to listed options on common stocks. The primary difference between stock options and index options occurs when index options are exercised. In the case of stock options, the underlying security, common stock, is delivered. However, upon the exercise of an index option, settlement does not occur by delivery of the securities comprising the index. The option holder who exercises the index option receives an amount of cash if the closing level of the stock index upon which the option is based is greater than, in the case of a call, or less than, in the case of a put, the exercise price of the option. This amount of cash is equal to the difference between the closing price of the stock index and the exercise price of the option expressed in dollars times a specified multiple. A stock index fluctuates with changes in the market value of the stocks included in the index. For example, some stock index options are based on a broad market index, such as the Standard & Poor's 500[®] Index or the Value Line Composite Index or a narrower market index, such as the Standard & Poor's 100[®]. Indices may also be based on an industry or market segment, such as the NYSE Arca Oil and Gas Index or the Business Equipment Index. Options on stock indices are currently traded on the Chicago Board Options Exchange, the New York Stock Exchange and the NASDAQ PHLX.

Each Fund's obligation to sell an instrument subject to a call option written by it, or to purchase an instrument subject to a put option written by it, may be terminated prior to the expiration date of the option by a Fund's execution of a closing purchase transaction, which is effected by purchasing on an exchange an option of the same series (*i.e.*, same underlying instrument, exercise price and expiration date) as the option previously written. A closing purchase transaction will ordinarily be effected to realize a profit on an outstanding option, to prevent an underlying instrument from being called, to permit the sale of the underlying instrument or to permit the writing of a new option containing different terms on such underlying instrument. The cost of such a liquidation purchase plus transactions costs may be greater than the premium received upon the original

option, in which event a Fund will have incurred a loss in the transaction. There is no assurance that a liquid secondary market will exist for any particular option. An option writer unable to effect a closing purchase transaction will not be able to sell the underlying instrument or liquidate the assets held in a segregated account, as described below, until the option expires or the optioned instrument is delivered upon exercise. In such circumstances, the writer will be subject to the risk of market decline or appreciation in the instrument during such period.

If an option purchased by a Fund expires unexercised, a Fund realizes a loss equal to the premium paid. If a Fund enters into a closing sale transaction on an option purchased by it, a Fund will realize a gain if the premium received by a Fund on the closing transaction is more than the premium paid to purchase the option or a loss if it is less. If an option written by a Fund expires on the stipulated expiration date or if a Fund enters into a closing purchase transaction, it will realize a gain (or loss if the cost of a closing purchase transaction exceeds the net premium received when the option is sold). If an option written by a Fund is exercised, the proceeds of the sale will be increased by the net premium originally received and a Fund will realize a gain or loss.

Certain Risks Regarding Options. There are several risks associated with transactions in options. For example, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given transaction not to achieve its objectives. In addition, a liquid secondary market for particular options, whether traded over-the-counter or on an exchange, may be absent for reasons which include the following: there may be insufficient trading interest in certain options; restrictions may be imposed by an exchange on opening transactions or closing transactions or both; trading halts, suspensions or other restrictions may be imposed with respect to particular classes or series of options or underlying securities or currencies; unusual or unforeseen circumstances may interrupt normal operations on an exchange; the facilities of an exchange or the Options Clearing Corporation may not at all times be adequate to handle current trading value; or one or more exchanges could, for economic or other reasons, decide or be compelled at some future date to discontinue the trading of options (or a particular class or series of options), in which event the secondary market on that exchange (or in that class or series of options) would cease to exist, although outstanding options that had been issued by the Options Clearing Corporation as a result of trades on that exchange would continue to be exercisable in accordance with their terms.

Successful use by a Fund of options on stock indices will be subject to the ability of the Adviser to correctly predict movements in the directions of the stock market. This requires different skills and techniques than predicting changes in the prices of individual securities. In addition, the Funds ability to effectively hedge all or a portion of the securities in its portfolio, in anticipation of or during a market decline, through transactions in put options on stock indices, depends on the degree to which price movements in the underlying index correlate with the price movements of the securities held by each Fund. Inasmuch as each Fund's securities will not duplicate the components of an index, the correlation will not be perfect. Consequently, each Fund bears the risk that the prices of its securities being hedged will not move in the same amount as the prices of its put options on the stock indices. It is also possible that there may be a negative correlation between the index and each Fund's securities that would result in a loss on both such securities and the options on stock indices acquired by a Fund.

The hours of trading for options may not conform to the hours during which the underlying securities are traded. To the extent that the options markets close before the markets for the underlying securities, significant price and rate movements can take place in the underlying markets that cannot be reflected in the options markets. The purchase of options is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The purchase of stock index options involves the risk that the premium and transaction costs paid by a Fund in purchasing an option will be lost as a result of unanticipated movements in prices of the securities comprising the stock index on which the option is based.

There is no assurance that a liquid secondary market on an options exchange will exist for any particular option, or at any particular time, and for some options no secondary market on an exchange or elsewhere may exist. If a Fund is unable to close out a call option on securities that it has written before the option is exercised, a Fund may be required to purchase the optioned securities in order to satisfy its obligation under the option to deliver such securities. If a Fund was unable to effect a closing sale transaction with respect to options on securities that it has purchased, it would have to exercise the option in order to realize any profit and would incur transaction costs upon the purchase and sale of the underlying securities.

Cover for Options Positions. Transactions using options (other than options that a Fund has purchased) expose a Fund to an obligation to another party. Each Fund will not enter into any such transactions unless it owns either (i) an offsetting ("covered") position in securities or other options or (ii) cash or liquid securities with a value sufficient at all times to cover its

potential obligations not covered as provided in (i) above. Each Fund will comply with SEC guidelines regarding cover for these instruments and, if the guidelines so require, set aside cash or liquid securities in a segregated account with the Custodian in the prescribed amount. Under current SEC guidelines, each Fund will segregate assets to cover transactions in which each Fund writes or sells options.

Assets used as cover or held in a segregated account cannot be sold while the position in the corresponding option is open, unless they are replaced with similar assets. As a result, the commitment of a large portion of a Fund's assets to cover or segregated accounts could impede portfolio management or a Fund's ability to meet redemption requests or other current obligations.

Dealer Options

Each Fund may engage in transactions involving dealer options as well as exchange-traded options. Certain additional risks are specific to dealer options. While a Fund might look to a clearing corporation to exercise exchange-traded options, if a Fund were to purchase a dealer option it would need to rely on the dealer from which it purchased the option to perform if the option were exercised. Failure by the dealer to do so would result in the loss of the premium paid by a Fund as well as loss of the expected benefit of the transaction.

Exchange-traded options generally have a continuous liquid market while dealer options may not. Consequently, a Fund may generally be able to realize the value of a dealer option it has purchased only by exercising or reselling the option to the dealer who issued it. Similarly, when a Fund writes a dealer option, a Fund may generally be able to close out the option prior to its expiration only by entering into a closing purchase transaction with the dealer to whom a Fund originally wrote the option. While each Fund will seek to enter into dealer options only with dealers who will agree to and which are expected to be capable of entering into closing transactions with a Fund, there can be no assurance that a Fund will at any time be able to liquidate a dealer option at a favorable price at any time prior to expiration. Unless a Fund, as a covered dealer call option writer, is able to effect a closing purchase transaction, it will not be able to liquidate securities (or other assets) used as cover until the option expires or is exercised. In the event of insolvency of the other party, a Fund may be unable to liquidate a dealer option. With respect to options written by each Fund, the inability to enter into a closing transaction may result in material losses to each Fund. For example, because a Fund must maintain a secured position with respect to any call option on a security it writes, a Fund may not sell the assets that it has segregated to secure the position while it is obligated under the option. This requirement may impair each Fund's ability to sell portfolio securities at a time when such sale might be advantageous.

The Staff of the SEC has taken the position that purchased dealer options are illiquid securities. Each Fund may treat the cover used for written dealer options as liquid if the dealer agrees that a Fund may repurchase the dealer option it has written for a maximum price to be calculated by a predetermined formula. In such cases, the dealer option would be considered illiquid only to the extent the maximum purchase price under the formula exceeds the intrinsic value of the option. Accordingly, a Fund will treat dealer options as subject to each Fund's limitation on illiquid securities. If the SEC changes its position on the liquidity of dealer options, a Fund will change its treatment of such instruments accordingly.

Spread Transactions

A Fund may purchase covered spread options from securities dealers. These covered spread options are not presently exchange-listed or exchange-traded. The purchase of a spread option gives a Fund the right to put securities that it owns at a fixed dollar spread or fixed yield spread in relationship to another security that a Fund does not own, but which is used as a benchmark. The risk to a Fund, in addition to the risks of dealer options described above, is the cost of the premium paid as well as any transaction costs. The purchase of spread options will be used to protect each Fund against adverse changes in prevailing credit quality spreads, *i.e.*, the yield spread between high quality and lower quality securities. This protection is provided only during the life of the spread options.

Swap Agreements

Each Fund may enter into interest rate, index and currency exchange rate swap agreements in an attempt to obtain a particular desired return at a lower cost to each Fund than if it had invested directly in an instrument that yielded that desired return. Swap agreements are two-party contracts entered into primarily by institutional investors for periods ranging from a few weeks to more than one year. In a standard "swap" transaction, two parties agree to exchange the returns (or differentials in rates of returns) earned or realized on particular predetermined investments or instruments. The gross returns to be exchanged

or "swapped" between the parties are calculated with respect to a "notional amount," i.e., the return on or increase in value of a particular dollar amount invested at a particular interest rate, in a particular foreign currency, or in a "basket" of securities representing a particular index. The "notional amount" of the swap agreement is only a fictive basis on which to calculate the obligations the parties to a swap agreement have agreed to exchange. Each Fund's obligations (or rights) under a swap agreement will generally be equal only to the amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement (the "net amount"). Each Fund's obligations under a swap agreement will be accrued daily (offset against any amounts owing to each Fund) and any accrued but unpaid net amounts owed to a swap counterparty will be covered by the maintenance of a segregated account consisting of cash, U.S. government securities, or other liquid securities, to avoid leveraging of each Fund's portfolio.

Whether a Fund's use of swap agreements enhance the Fund's total return will depend on the Adviser's ability correctly to predict whether certain types of investments are likely to produce greater returns than other investments. Because they are two-party contracts and may have terms of greater than seven days, swap agreements may be considered to be illiquid. Moreover, each Fund bears the risk of loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty. The Funds' adviser will cause each Fund to enter into swap agreements only with counterparties that would be eligible for consideration as repurchase agreement counterparties under each Fund's repurchase agreement guidelines. The swap market is a relatively new market and is largely unregulated. It is possible that developments in the swaps market, including potential government regulation, could adversely affect each Fund's ability to terminate existing swap agreements or to realize amounts to be received under such agreements.

Certain swap agreements are exempt from most provisions of the Commodity Exchange Act ("CEA") and, therefore, are not regulated as futures or commodity option transactions under the CEA, pursuant to regulations of the Commodity Futures Trading Commission ("CFTC"). To qualify for this exemption, a swap agreement must be entered into by "eligible participants," which include the following, provided the participants' total assets exceed established levels: a bank or trust company, savings association or credit union, insurance company, investment company subject to regulation under the 1940 Act, commodity pool, corporation, partnership, proprietorship, organization, trust or other entity, employee benefit plan, governmental entity, broker-dealer, futures commission merchant, natural person, or regulated foreign person. To be eligible, natural persons and most other entities must have total assets exceeding \$10 million; commodity pools and employees benefit plans must have assets exceeding \$5 million. In addition, an eligible swap transaction must meet three conditions. First, the swap agreement may not be part of a fungible class of agreements that are standardized as to their material economic terms. Second, the creditworthiness of parties with actual or potential obligations under the swap agreement must be a material consideration in entering into or determining the terms of the swap agreement, including pricing, cost or credit enhancement terms. Third, swap agreements may not be entered into and traded on or through a multilateral transaction execution facility.

Certain Investment Techniques and Derivatives Risks.

When the adviser of the Funds uses investment techniques such as margin, leverage and short sales, and forms of financial derivatives, such as options and futures, an investment in the Funds may be more volatile than investments in other mutual funds. Although the intention is to use such investment techniques and derivatives to minimize risk to the Funds, as well as for speculative purposes, there is the possibility that improper implementation of such techniques and derivative strategies or unusual market conditions could result in significant losses to the Funds. Derivatives are used to limit risk in the Funds or to enhance investment return and have a return tied to a formula based upon an interest rate, index, price of a security, or other measurement. Derivatives involve special risks, including: (1) the risk that interest rates, securities prices and currency markets will not move in the direction that a portfolio manager anticipates; (2) imperfect correlation between the price of derivative instruments and movements in the prices of the securities, interest rates or currencies being hedged; (3) the fact that skills needed to use these strategies are different than those needed to select portfolio securities; (4) the possible absence of a liquid secondary market for any particular instrument and possible exchange imposed price fluctuation limits, either of which may make it difficult or impossible to close out a position when desired; (5) the risk that adverse price movements in an instrument can result in a loss substantially greater than each Fund's initial investment in that instrument (in some cases, the potential loss is unlimited); (6) particularly in the case of privately-negotiated instruments, the risk that the counterparty will not perform its obligations, or that penalties could be incurred for positions held less than the required minimum holding period, which could leave a Fund worse off than if it had not entered into the position; and (7) the inability to close out certain hedged positions to avoid adverse tax consequences. In addition, the use of derivatives for non-hedging purposes (that is, to seek to increase total return) is considered a speculative practice and may present an even greater risk of loss than when used for hedging purposes.

Trading in Swap Contracts

A swap contract is a derivative financial instrument pursuant to which parties (known as counter-parties) exchange cash flows over an agreed-upon time frame based upon a notional par amount using reference to agreed-upon prices, rates, indices or other financial market measures to determine the cash flows to be exchanged. Common examples include: (1) interest rate swaps where one counterparty pays a fixed rate of interest and the other counterparty pays a floating rate based upon a reference rate such as the London Inter-Bank Offered Rate ("LIBOR"); total return swaps where one counterparty pays a floating rate based upon a reference rate such as LIBOR and the other counterparty pays the total rate of return of a stock market index such as the Standard & Poor's 500; credit default swaps where one counterparty pays a fixed rate and the other counterparty pays a floating rate derived from the default related losses of a single issuer or a basket of issuers. Swap contracts can be used for both (1) investment purposes, as a substitute for an investment in an actual security or portfolio of securities, and for (2) hedging purposes to adjust the exposure of a portfolio to various market factors such as interest rates, debt default rates and stock market rates of return.

The use of swaps as an investment strategy or hedging vehicle may result in lower performance than if the Funds had not used swap contracts because swaps may be subject to additional risks including the following: liquidity risk, counter-party default risk, correlation risk and leverage risk.

The Funds may enter into interest rate swaps. Interest rate swaps, in their most basic form, involve the exchange by the Funds with another party of their respective commitments to pay or receive interest. For example, the Funds might exchange its right to receive certain floating rate payments in exchange for another party's right to receive fixed rate payments. Interest rate swaps can take a variety of other forms, such as agreements to pay the net differences between two different interest indexes or rates, even if the parties do not own the underlying instruments. Despite their differences in form, the function of interest rate swaps is generally the same: to increase or decrease a Fund's exposure to long or short-term interest rates. For example, the Funds may enter into a swap transaction to preserve a return or spread on a particular investment or a portion of its portfolio or to protect against any increase in the price of securities the Funds anticipates purchasing at a later date.

The Funds may enter into credit default swap ("CDS") contracts for investment purposes. If the Funds are a seller in a CDS contract, the Funds would be required to pay the par (or other agreed-upon) value of a reference debt obligation to the counterparty in the event of a default by a third party, such as a U.S. or foreign corporate issuer, on the debt obligation. In return, the Funds would receive from the counterparty a periodic stream of payments over the term of the contract provided that no event of default has occurred. If no default occurs, the Funds would keep the stream of payments and would have no payment obligations. As the seller, the Funds would be subject to investment exposure on the notional amount of the swap.

The Funds may also purchase CDS contracts in order to hedge against the risk of default of debt securities it holds, in which case the Funds would function as the counterparty referenced in the preceding paragraph. This would involve the risk that the swap may expire worthless and would only generate income in the event of an actual default by the issuer of the underlying obligation (as opposed to a credit downgrade or other indication of financial instability). It would also involve credit risk; the seller may fail to satisfy its payment obligations to the Funds in the event of a default.

The Funds may enter into total return swaps. Total return swaps are used either as substitutes for owning the physical securities that comprise a given market index or as a means of obtaining non-leveraged exposure in markets where no physical securities are available, such as an interest rate index. Total return refers to the payment (or receipt) of an index's total return, which is then exchanged for the receipt (or payment) of a floating interest rate. Total return swaps provide the Funds with the additional flexibility of gaining exposure to a market or sector index by using the most cost-effective vehicle available. For example, the Funds can gain exposure to the broad mortgage sector by entering into a swap agreement whereby the Funds receives the total return of the Lehman Brothers Mortgage Index in exchange for a short-term floating interest rate, such as the 3-month LIBOR. This is fundamentally identical to purchasing the underlying securities that comprise the index, which requires an investor to pay cash, thereby surrendering the short-term interest rate to be earned from cash holdings, in order to receive the return of the index. Total return swaps provide the Funds with the opportunity to actively manage the cash maintained by the Funds as a result of not having to purchase securities to replicate a given index. Similar to interest rate swaps, the cash backing total return swaps are actively managed to earn a premium in excess of the floating rate paid on the swap.

The Funds may enter into equity swaps. In an equity swap, payments on one or both sides are linked to the performance of equities or an equity index. Equity swaps are normally used to (1) initiate and maintain cross-border equity exposures either in an index or a specific stock portfolio; (2) temporarily eliminate exposure to an equity portfolio without

disturbing the underlying equity position; or (3) increase, reduce, or eliminate market exposure to a single issue or a narrow stock portfolio or obtain greater diversification for a limited period of time without disturbing an underlying position.

FIXED INCOME/DEBT/BOND SECURITIES

Yields on fixed income securities, which the Funds define to include preferred stock, are dependent on a variety of factors, including the general conditions of the money market and other fixed income securities markets, the size of a particular offering, the maturity of the obligation and the rating of the issue. An investment in the Funds will be subjected to risk even if all fixed income securities in a Fund's portfolio are paid in full at maturity. All fixed income securities, including U.S. Government securities, can change in value when there is a change in interest rates or the issuer's actual or perceived creditworthiness or ability to meet its obligations.

There is normally an inverse relationship between the market value of securities sensitive to prevailing interest rates and actual changes in interest rates. In other words, an increase in interest rates produces a decrease in market value. The longer the remaining maturity (and duration) of a security, the greater will be the effect of interest rate changes on the market value of that security. Changes in the ability of an issuer to make payments of interest and principal and in the markets' perception of an issuer's creditworthiness will also affect the market value of the debt securities of that issuer. Obligations of issuers of fixed income securities (including municipal securities) are subject to the provisions of bankruptcy, insolvency, and other laws affecting the rights and remedies of creditors, such as the Federal Bankruptcy Reform Act of 1978. In addition, the obligations of municipal issuers may become subject to laws enacted in the future by Congress, state legislatures, or referenda extending the time for payment of principal and/or interest, or imposing other constraints upon enforcement of such obligations or upon the ability of municipalities to levy taxes. Changes in the ability of an issuer to make payments of interest and principal and in the market's perception of an issuer's creditworthiness will also affect the market value of the debt securities of that issuer. The possibility exists, therefore, that the ability of any issuer to pay, when due, the principal of and interest on its debt securities may become impaired.

The corporate debt securities in which the Funds may invest include corporate bonds and notes and short-term investments such as commercial paper and variable rate demand notes. Commercial paper (short-term promissory notes) is issued by companies to finance their or their affiliate's current obligations and is frequently unsecured. Variable and floating rate demand notes are unsecured obligations redeemable upon not more than 30 days' notice. These obligations include master demand notes that permit investment of fluctuating amounts at varying rates of interest pursuant to a direct arrangement with the issuer of the instrument. The issuer of these obligations often has the right, after a given period, to prepay the outstanding principal amount of the obligations upon a specified number of days' notice. These obligations generally are not traded, nor generally is there an established secondary market for these obligations. To the extent a demand note does not have a 7-day or shorter demand feature and there is no readily available market for the obligation, it is treated as an illiquid security.

The Funds may invest in debt securities, including non-investment grade debt securities. The following describes some of the risks associated with fixed income debt securities:

Interest Rate Risk. Debt securities have varying levels of sensitivity to changes in interest rates. In general, the price of a debt security can fall when interest rates rise and can rise when interest rates fall. Securities with longer maturities and mortgage securities can be more sensitive to interest rate changes although they usually offer higher yields to compensate investors for the greater risks. The longer the maturity of the security, the greater the impact a change in interest rates could have on the security's price. In addition, short-term and long-term interest rates do not necessarily move in the same amount or the same direction. Short-term securities tend to react to changes in short-term interest rates and long-term securities tend to react to changes in long-term interest rates.

Credit Risk. Fixed income securities have speculative characteristics and changes in economic conditions or other circumstances are more likely to lead to a weakened capacity of those issuers to make principal or interest payments, as compared to issuers of more highly rated securities.

Extension Risk. The Funds are subject to the risk that an issuer will exercise its right to pay principal on an obligation held by the Funds (such as mortgage-backed securities) later than expected. This may happen when there is a rise in interest rates. These events may lengthen the duration (i.e. interest rate sensitivity) and potentially reduce the value of these securities.

Prepayment Risk. Certain types of debt securities, such as mortgage-backed securities, have yield and maturity characteristics corresponding to underlying assets. Unlike traditional debt securities, which may pay a fixed rate of interest until maturity when the entire principal amount comes due, payments on certain mortgage-backed securities may include both interest and a partial payment of principal. Besides the scheduled repayment of principal, payments of principal may result from the voluntary prepayment, refinancing, or foreclosure of the underlying mortgage loans.

Securities subject to prepayment are less effective than other types of securities as a means of "locking in" attractive long-term interest rates. One reason is the need to reinvest prepayments of principal; another is the possibility of significant unscheduled prepayments resulting from declines in interest rates. These prepayments would have to be reinvested at lower rates. As a result, these securities may have less potential for capital appreciation during periods of declining interest rates than other securities of comparable maturities, although they may have a similar risk of decline in market value during periods of rising interest rates. Prepayments may also significantly shorten the effective maturities of these securities, especially during periods of declining interest rates. Conversely, during periods of rising interest rates, a reduction in prepayments may increase the effective maturities of these securities, subjecting them to a greater risk of decline in market value in response to rising interest rates than traditional debt securities, and, therefore, potentially increasing the volatility of the Funds.

At times, some of the mortgage-backed securities in which the Funds may invest will have higher than market interest rates and therefore will be purchased at a premium above their par value. Prepayments may cause losses in securities purchased at a premium, as unscheduled prepayments, which are made at par, will cause the Funds to experience a loss equal to any unamortized premium.

Certificates of Deposit and Bankers' Acceptances

The Funds may invest in certificates of deposit and bankers' acceptances, which are considered to be short-term money market instruments.

Certificates of deposit are receipts issued by a depository institution in exchange for the deposit of funds. The issuer agrees to pay the amount deposited plus interest to the bearer of the receipt on the date specified on the certificate. The certificate usually can be traded in the secondary market prior to maturity. Bankers' acceptances typically arise from short-term credit arrangements designed to enable businesses to obtain funds to finance commercial transactions. Generally, an acceptance is a time draft drawn on a bank by an exporter or an importer to obtain a stated amount of funds to pay for specific merchandise. The draft is then "accepted" by a bank that, in effect, unconditionally guarantees to pay the face value of the instrument on its maturity date. The acceptance may then be held by the accepting bank as an earning asset or it may be sold in the secondary market at the going rate of discount for a specific maturity. Although maturities for acceptances can be as long as 270 days, most acceptances have maturities of six months or less.

Commercial Paper

The Funds may purchase commercial paper. Commercial paper consists of short-term (usually from 1 to 270 days) unsecured promissory notes issued by corporations in order to finance their current operations. It may be secured by letters of credit, a surety bond or other forms of collateral. Commercial paper is usually repaid at maturity by the issuer from the proceeds of the issuance of new commercial paper. As a result, investment in commercial paper is subject to the risk the issuer cannot issue enough new commercial paper to satisfy its outstanding commercial paper, also known as rollover risk. Commercial paper may become illiquid or may suffer from reduced liquidity in certain circumstances. Like all fixed income securities, commercial paper prices are susceptible to fluctuations in interest rates. If interest rates rise, commercial paper prices will decline. The short-term nature of a commercial paper investment makes it less susceptible to interest rate risk than many other fixed income securities because interest rate risk typically increases as maturity lengths increase. Commercial paper tends to yield smaller returns than longer-term corporate debt because securities with shorter maturities typically have lower effective yields than those with longer maturities. As with all fixed income securities, there is a chance that the issuer will default on its commercial paper obligation.

Time Deposits and Variable Rate Notes

The Funds may invest in fixed time deposits, whether or not subject to withdrawal penalties. The commercial paper obligations that the Funds may buy are unsecured and may include variable rate notes. The nature and terms of a variable rate

note (i.e., a "Master Note") permit the Funds to invest fluctuating amounts at varying rates of interest pursuant to a direct arrangement between each Fund as Lender, and the issuer, as borrower. It permits daily changes in the amounts borrowed. The Funds have the right at any time to increase, up to the full amount stated in the note agreement, or to decrease the amount outstanding under the note. The issuer may prepay at any time and without penalty any part of or the full amount of the note. The note may or may not be backed by one or more bank letters of credit. Because these notes are direct lending arrangements between the Funds and the issuer, it is not generally contemplated that they will be traded; moreover, there is currently no secondary market for them. Except as specifically provided in the Prospectus, there is no limitation on the type of issuer from whom these notes may be purchased; however, in connection with such purchase and on an ongoing basis, the Funds' Adviser will consider the earning power, cash flow and other liquidity ratios of the issuer, and its ability to pay principal and interest on demand, including a situation in which all holders of such notes made demand simultaneously. Variable rate notes are subject to the Funds' investment restriction on illiquid securities unless such notes can be put back to the issuer on demand within seven days.

Insured Bank Obligations

The Funds may invest in insured bank obligations. The Federal Deposit Insurance Corporation ("FDIC") insures the deposits of federally insured banks and savings and loan associations (collectively referred to as "banks") up to \$250,000. The Funds may purchase bank obligations that are fully insured as to principal by the FDIC. Currently, to remain fully insured as to principal, these investments must be limited to \$250,000 per bank; if the principal amount and accrued interest together exceed \$250,000, the excess principal and accrued interest will not be insured. Insured bank obligations may have limited marketability.

High Yield Securities

The Funds may invest in high yield securities. High yield, high risk bonds are securities that are generally rated below investment grade by the primary rating agencies (BB+ or lower by S&P and Ba1 or lower by Moody's). Other terms used to describe such securities include "lower rated bonds," "non-investment grade bonds," "below investment grade bonds," and "junk bonds." These securities are considered to be high-risk investments. The risks include the following:

Greater Risk of Loss. These securities are regarded as predominately speculative. There is a greater risk that issuers of lower rated securities will default than issuers of higher rated securities. Issuers of lower rated securities generally are less creditworthy and may be highly indebted, financially distressed, or bankrupt. These issuers are more vulnerable to real or perceived economic changes, political changes or adverse industry developments. In addition, high yield securities are frequently subordinated to the prior payment of senior indebtedness. If an issuer fails to pay principal or interest, the Funds would experience a decrease in income and a decline in the market value of its investments.

Sensitivity to Interest Rate and Economic Changes. The income and market value of lower-rated securities may fluctuate more than higher rated securities. Although non-investment grade securities tend to be less sensitive to interest rate changes than investment grade securities, non-investment grade securities are more sensitive to short-term corporate, economic and market developments. During periods of economic uncertainty and change, the market price of the investments in lower-rated securities may be volatile. The default rate for high yield bonds tends to be cyclical, with defaults rising in periods of economic downturn. For example, in 2000, 2001 and 2002, the default rate for high yield securities was significantly higher than in the prior or subsequent years.

Valuation Difficulties. It is often more difficult to value lower rated securities than higher rated securities. If an issuer's financial condition deteriorates, accurate financial and business information may be limited or unavailable. In addition, the lower rated investments may be thinly traded and there may be no established secondary market. Because of the lack of market pricing and current information for investments in lower rated securities, valuation of such investments is much more dependent on judgment than is the case with higher rated securities.

Liquidity. There may be no established secondary or public market for investments in lower rated securities. Such securities are frequently traded in markets that may be relatively less liquid than the market for higher rated securities. In addition, relatively few institutional purchasers may hold a major portion of an issue of lower-rated securities at times. As a result, the Funds may be required to sell investments at substantial losses or retain them indefinitely when an issuer's financial condition is deteriorating.

Credit Quality. Credit quality of non-investment grade securities can change suddenly and unexpectedly, and even recently-issued credit ratings may not fully reflect the actual risks posed by a particular high-yield security.

New Legislation. Future legislation may have a possible negative impact on the market for high yield, high risk bonds. As an example, in the late 1980's, legislation required federally-insured savings and loan associations to divest their investments in high yield, high risk bonds. New legislation, if enacted, could have a material negative effect on the Funds' investments in lower rated securities.

High yield, high risk investments may include the following:

Straight fixed-income debt securities. These include bonds and other debt obligations that bear a fixed or variable rate of interest payable at regular intervals and have a fixed or resettable maturity date. The particular terms of such securities vary and may include features such as call provisions and sinking funds.

Zero-coupon debt securities. These bear no interest obligation but are issued at a discount from their value at maturity. When held to maturity, their entire return equals the difference between their issue price and their maturity value.

Zero-fixed-coupon debt securities. These are zero-coupon debt securities that convert on a specified date to interest-bearing debt securities.

Pay-in-kind bonds. These are bonds which allow the issuer, at its option, to make current interest payments on the bonds either in cash or in additional bonds. These are bonds sold without registration under the Securities Act of 1933, as amended (the "Securities Act"), usually to a relatively small number of institutional investors.

Convertible Securities. These are bonds or preferred stock that may be converted to common stock.

Preferred Stock. These are stocks that generally pay a dividend at a specified rate and have preference over common stock in the payment of dividends and in liquidation.

Loan Participations and Assignments. These are participations in, or assignments of all or a portion of loans to corporations or to governments, including governments of less developed countries.

Securities issued in connection with Reorganizations and Corporate Restructurings. In connection with reorganizing or restructuring of an issuer, an issuer may issue common stock or other securities to holders of its debt securities. The Funds may hold such common stock and other securities even if it does not invest in such securities.

Municipal Government Obligations

In general, municipal obligations are debt obligations issued by or on behalf of states, territories and possessions of the United States (including the District of Columbia) and their political subdivisions, agencies and instrumentalities. Municipal obligations generally include debt obligations issued to obtain funds for various public purposes. Certain types of municipal obligations are issued in whole or in part to obtain funding for privately operated facilities or projects. Municipal obligations include general obligation bonds, revenue bonds, industrial development bonds, notes and municipal lease obligations. Municipal obligations also include additional obligations, the interest on which is exempt from federal income tax, that may become available in the future as long as the Board of the Funds determines that an investment in any such type of obligation is consistent with each Fund's investment objectives. Municipal obligations may be fully or partially backed by local government, the credit of a private issuer, current or anticipated revenues from a specific project or specific assets or domestic or foreign entities providing credit support such as letters of credit, guarantees or insurance.

Bonds and Notes. General obligation bonds are secured by the issuer's pledge of its full faith, credit and taxing power for the payment of interest and principal. Revenue bonds are payable only from the revenues derived from a project or facility or from the proceeds of a specified revenue source. Industrial development bonds are generally revenue bonds secured by payments from and the credit of private users. Municipal notes are issued to meet the short-term funding requirements of state, regional and local governments. Municipal notes include tax anticipation notes, bond anticipation notes, revenue anticipation notes, tax and revenue anticipation notes, construction loan notes, short-term discount notes, tax-exempt commercial paper, demand notes and similar instruments.

Municipal Lease Obligations. Municipal lease obligations may take the form of a lease, an installment purchase or a conditional sales contract. They are issued by state and local governments and authorities to acquire land, equipment and facilities, such as vehicles, telecommunications and computer equipment and other capital assets. The Funds may invest in Underlying Funds that purchase these lease obligations directly, or it may purchase participation interests in such lease obligations (see "Participation Interests" section). States have different requirements for issuing municipal debt and issuing municipal leases. Municipal leases are generally subject to greater risks than general obligation or revenue bonds because they usually contain a "non-appropriation" clause, which provides that the issuer is not obligated to make payments on the obligation in future years unless funds have been appropriated for this purpose each year. Such non-appropriation clauses are required to avoid the municipal lease obligations from being treated as debt for state debt restriction purposes. Accordingly, such obligations are subject to "non-appropriation" risk. Municipal leases may be secured by the underlying capital asset and it may be difficult to dispose of any such asset in the event of non-appropriation or other default.

United States Government Obligations

These consist of various types of marketable securities issued by the United States Treasury, i.e., bills, notes and bonds. Such securities are direct obligations of the United States government and differ mainly in the length of their maturity. Treasury bills, the most frequently issued marketable government security, have a maturity of up to one year and are issued on a discount basis. The Funds may also invest in Treasury Inflation-Protected Securities ("TIPS"). TIPS are special types of treasury bonds that were created in order to offer bond investors protection from inflation. The values of the TIPS are automatically adjusted to the inflation rate as measured by the Consumer Price Index ("CPI"). If the CPI goes up by half a percent, the value of the bond (the TIPS) would also go up by half a percent. If the CPI falls, the value of the bond does not fall because the government guarantees that the original investment will stay the same. TIPS decline in value when real interest rates rise. However, in certain interest rate environments, such as when real interest rates are rising faster than nominal interest rates, TIPS may experience greater losses than other fixed income securities with similar duration.

United States Government Agency Obligations

These consist of debt securities issued by agencies and instrumentalities of the United States government, including the various types of instruments currently outstanding or which may be offered in the future. Agencies include, among others, the Federal Housing Administration, Government National Mortgage Association ("GNMA"), Farmer's Home Administration, Export-Import Bank of the United States, Maritime Administration, and General Services Administration. Instrumentalities include, for example, each of the Federal Home Loan Banks, the National Bank for Cooperatives, the Federal Home Loan Mortgage Corporation ("FHLMC"), the Farm Credit Banks, the Federal National Mortgage Association ("FNMA"), and the United States Postal Service. These securities are either: (i) backed by the full faith and credit of the United States government (e.g., United States Treasury Bills); (ii) guaranteed by the United States Treasury (e.g., GNMA mortgage-backed securities); (iii) supported by the issuing agency's or instrumentality's right to borrow from the United States Treasury (e.g., FNMA Discount Notes); or (iv) supported only by the issuing agency's or instrumentality's own credit (e.g., Tennessee Valley Association). On September 7, 2008, the U.S. Treasury Department and the Federal Housing Finance Authority (the "FHFA") announced that FNMA and FHLMC had been placed into conservatorship, a statutory process designed to stabilize a troubled institution with the objective of returning the entity to normal business operations. The U.S. Treasury Department and the FHFA at the same time established a secured lending facility and a Secured Stock Purchase Agreement with both FNMA and FHLMC to ensure that each entity had the ability to fulfill its financial obligations. The FHFA announced that it does not anticipate any disruption in pattern of payments or ongoing business operations of FNMA and FHLMC.

Government-related guarantors (i.e. not backed by the full faith and credit of the United States Government) include FNMA and FHLMC. FNMA is a government-sponsored corporation owned entirely by private stockholders. It is subject to general regulation by the Secretary of Housing and Urban Development. FNMA purchases conventional (i.e., not insured or guaranteed by any government agency) residential mortgages from a list of approved seller/servicers which include state and federally chartered savings and loan associations, mutual savings banks, commercial banks and credit unions and mortgage bankers. Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA but are not backed by the full faith and credit of the United States Government.

FHLMC was created by Congress in 1970 for the purpose of increasing the availability of mortgage credit for residential housing. It is a government-sponsored corporation formerly owned by the twelve Federal Home Loan Banks and now owned entirely by private stockholders. FHLMC issues Participation Certificates ("PCs"), which represent interests in conventional

mortgages from FHLMC's national portfolio. FHLMC guarantees the timely payment of interest and ultimate collection of principal, but PCs are not backed by the full faith and credit of the United States Government. Commercial banks, savings and loan institutions, private mortgage insurance companies, mortgage bankers and other secondary market issuers also create pass-through pools of conventional residential mortgage loans. Such issuers may, in addition, be the originators and/or servicers of the underlying mortgage loans as well as the guarantors of the mortgage-related securities. Pools created by such nongovernmental issuers generally offer a higher rate of interest than government and government-related pools because there are no direct or indirect government or agency guarantees of payments in the former pools. However, timely payment of interest and principal of these pools may be supported by various forms of insurance or guarantees, including individual loan, title, pool and hazard insurance and letters of credit. The insurance and guarantees are issued by governmental entities, private insurers and the mortgage poolers.

Mortgage Pass-Through Securities

Interests in pools of mortgage pass-through securities differ from other forms of debt securities (which normally provide periodic payments of interest in fixed amounts and the payment of principal in a lump sum at maturity or on specified call dates). Instead, mortgage pass-through securities provide monthly payments consisting of both interest and principal payments. In effect, these payments are a "pass-through" of the monthly payments made by the individual borrowers on the underlying residential mortgage loans, net of any fees paid to the issuer or guarantor of such securities. Unscheduled payments of principal may be made if the underlying mortgage loans are repaid or refinanced or the underlying properties are foreclosed, thereby shortening the securities' weighted average life. Some mortgage pass-through securities (such as securities guaranteed by GNMA) are described as "modified pass-through securities." These securities entitle the holder to receive all interest and principal payments owed on the mortgage pool, net of certain fees, on the scheduled payment dates regardless of whether the mortgagor actually makes the payment.

The principal governmental guarantor of mortgage pass-through securities is GNMA. GNMA is authorized to guarantee, with the full faith and credit of the U.S. Treasury, the timely payment of principal and interest on securities issued by lending institutions approved by GNMA (such as savings and loan institutions, commercial banks and mortgage bankers) and backed by pools of mortgage loans. These mortgage loans are either insured by the Federal Housing Administration or guaranteed by the Veterans Administration. A "pool" or group of such mortgage loans is assembled and after being approved by GNMA, is offered to investors through securities dealers.

Government-related guarantors of mortgage pass-through securities (i.e., not backed by the full faith and credit of the U.S. Treasury) include FNMA and FHLMC. FNMA is a government-sponsored corporation owned entirely by private stockholders. It is subject to general regulation by the Secretary of Housing and Urban Development. FNMA purchases conventional (i.e., not insured or guaranteed by any government agency) residential mortgages from a list of approved sellers/servicers which include state and federally chartered savings and loan associations, mutual savings banks, commercial banks and credit unions and mortgage bankers. Mortgage pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA but are not backed by the full faith and credit of the U.S. Treasury.

Resets. The interest rates paid on the Adjustable Rate Mortgage Securities ("ARMs") in which the Funds may invest generally are readjusted or reset at intervals of one year or less to an increment over some predetermined interest rate index. There are two main categories of indices: those based on U.S. Treasury securities and those derived from a calculated measure, such as a cost of funds index or a moving average of mortgage rates. Commonly utilized indices include the one-year and five-year constant maturity Treasury Note rates, the three-month Treasury Bill rate, the 180-day Treasury Bill rate, rates on longer-term Treasury securities, the National Median Cost of Funds, the one-month or three-month London Interbank Offered Rate (LIBOR), the prime rate of a specific bank, or commercial paper rates. Some indices, such as the one-year constant maturity Treasury Note rate, closely mirror changes in market interest rate levels. Others tend to lag changes in market rate levels and tend to be somewhat less volatile.

Caps and Floors. The underlying mortgages which collateralize the ARMs in which the Funds invest will frequently have caps and floors which limit the maximum amount by which the loan rate to the residential borrower may change up or down: (1) per reset or adjustment interval, and (2) over the life of the loan. Some residential mortgage loans restrict periodic adjustments by limiting changes in the borrower's monthly principal and interest payments rather than limiting interest rate changes. These payment caps may result in negative amortization. The value of mortgage securities in which the Funds invest may be affected if market interest rates rise or fall faster and farther than the allowable caps or floors on the underlying residential mortgage loans.

Additionally, even though the interest rates on the underlying residential mortgages are adjustable, amortization and prepayments may occur, thereby causing the effective maturities of the mortgage securities in which the Funds invest to be shorter than the maturities stated in the underlying mortgages.

Preferred Stock

The Funds define preferred stock as form of fixed income security because it has similar features to other forms of fixed income securities. Preferred stocks are securities that have characteristics of both common stocks and corporate bonds. Preferred stocks may receive dividends, but payment is not guaranteed as with a bond. These securities may be undervalued because of a lack of analyst coverage resulting in a high dividend yield or yield to maturity. The risks of preferred stocks include a lack of voting rights and the Funds' adviser may incorrectly analyze the security, resulting in a loss to the Funds. Furthermore, preferred stock dividends are not guaranteed, and management can elect to forego the preferred dividend, resulting in a loss to the Funds. Preferred stock may also be convertible in the common stock of the issuer. Convertible securities may be exchanged or converted into a predetermined number of shares of the issuer's underlying common stock at the option of the holder during a specified period. Convertible securities are senior to common stocks in an issuer's capital structure but are usually subordinated to similar non-convertible securities. A convertible security also gives an investor the opportunity, through its conversion feature, to participate in the capital appreciation of the issuing company depending upon a market price advance in the convertible security's underlying common stock. In general, preferred stocks generally pay a dividend at a specified rate and have preference over common stock in the payment of dividends and in liquidation. The Funds may invest in preferred stock with any or no credit rating. Preferred stock is a class of stock having a preference over common stock as to the payment of dividends and the recovery of investment should a company be liquidated, although preferred stock is usually junior to the debt securities of the issuer. Preferred stock market value may change based on changes in interest rates.

Foreign Securities

The Funds may invest in securities of foreign issuers and exchange traded funds ("ETFs") and other investment companies that hold a portfolio of foreign securities. Investing in securities of foreign companies and countries involves certain considerations and risks that are not typically associated with investing in U.S. government securities and securities of domestic companies. There may be less publicly available information about a foreign issuer than a domestic one, and foreign companies are not generally subject to uniform accounting, auditing and financial standards and requirements comparable to those applicable to U.S. companies. There may also be less government supervision and regulation of foreign securities exchanges, brokers and listed companies than exists in the United States. Interest and dividends paid by foreign issuers may be subject to withholding and other foreign taxes, which may decrease the net return on such investments as compared to dividends and interest paid to the Funds by domestic companies or the U.S. government. There may be the possibility of expropriations, seizure or nationalization of foreign deposits, confiscatory taxation, political, economic or social instability or diplomatic developments that could affect assets of the Funds held in foreign countries. Finally, the establishment of exchange controls or other foreign governmental laws or restrictions could adversely affect the payment of obligations.

To the extent the Funds' currency exchange transactions do not fully protect the Funds against adverse changes in currency exchange rates, decreases in the value of currencies of the foreign countries in which the Funds will invest relative to the U.S. dollar will result in a corresponding decrease in the U.S. dollar value of the Funds' assets denominated in those currencies (and possibly a corresponding increase in the amount of securities required to be liquidated to meet distribution requirements). Conversely, increases in the value of currencies of the foreign countries in which the Funds invest relative to the U.S. dollar will result in a corresponding increase in the U.S. dollar value of the Funds' assets (and possibly a corresponding decrease in the amount of securities to be liquidated).

Emerging Markets Securities. The Funds may purchase securities of emerging market issuers and ETFs and other closed end funds that invest in emerging market securities. Investing in emerging market securities imposes risks different from, or greater than, risks of investing in foreign developed countries. These risks include: smaller market capitalization of securities markets, which may suffer periods of relative illiquidity; significant price volatility; restrictions on foreign investment; possible repatriation of investment income and capital. In addition, foreign investors may be required to register the proceeds of sales; future economic or political crises could lead to price controls, forced mergers, expropriation or confiscatory taxation, seizure, nationalization, or creation of government monopolies. The currencies of emerging market countries may experience significant declines against the U.S. dollar, and devaluation may occur subsequent to investments in these currencies by the Funds. Inflation and rapid fluctuations in inflation rates have had, and may continue to have, negative effects on the economies and securities markets of certain emerging market countries.

Additional risks of emerging markets securities may include: greater social, economic and political uncertainty and instability; more substantial governmental involvement in the economy; less governmental supervision and regulation; unavailability of currency hedging techniques; companies that are newly organized and small; differences in auditing and financial reporting standards, which may result in unavailability of material information about issuers; and less developed legal systems. In addition, emerging securities markets may have different clearance and settlement procedures, which may be unable to keep pace with the volume of securities transactions or otherwise make it difficult to engage in such transactions. Settlement problems may cause the Funds to miss attractive investment opportunities, hold a portion of its assets in cash pending investment, or be delayed in disposing of a portfolio security. Such a delay could result in possible liability to a purchaser of the security.

Depository Receipts. The Funds may invest in sponsored and unsponsored American Depositary Receipts ("ADRs"), which are receipts issued by an American bank or trust company evidencing ownership of underlying securities issued by a foreign issuer. ADRs, in registered form, are designed for use in U.S. securities markets. Unsponsored ADRs may be created without the participation of the foreign issuer. Holders of these ADRs generally bear all the costs of the ADR facility, whereas foreign issuers typically bear certain costs in a sponsored ADR. The bank or trust company depository of an unsponsored ADR may be under no obligation to distribute shareholder communications received from the foreign issuer or to pass through voting rights. Many of the risks described above regarding foreign securities apply to investments in ADRs.

Illiquid and Restricted Securities

The Funds may invest up to 15% of its net assets in illiquid securities. Illiquid securities include securities subject to contractual or legal restrictions on resale (e.g., because they have not been registered under the Securities Act of 1933 and securities that are otherwise not readily marketable (e.g., because trading in the security is suspended or because market makers do not exist or will not entertain bids or offers). Securities that have not been registered under the Securities Act are referred to as private placements or restricted securities and are purchased directly from the issuer or in the secondary market. Foreign securities that are freely tradable in their principal markets are not considered to be illiquid.

Restricted and other illiquid securities may be subject to the potential for delays on resale and uncertainty in valuation. The Funds might be unable to dispose of illiquid securities promptly or at reasonable prices and might thereby experience difficulty in satisfying redemption requests from shareholders. The Underlying Fund might have to register restricted securities in order to dispose of them, resulting in additional expense and delay. Adverse market conditions could impede such a public offering of securities.

A large institutional market exists for certain securities that are not registered under the Securities Act, including foreign securities. The fact that there are contractual or legal restrictions on resale to the general public or to certain institutions may not be indicative of the liquidity of such investments. Rule 144A under the Securities Act allows such a broader institutional trading market for securities otherwise subject to restrictions on resale to the general public. Rule 144A establishes a "safe harbor" from the registration requirements of the Securities Act for resale of certain securities to qualified institutional buyers. Rule 144A has produced enhanced liquidity for many restricted securities, and market liquidity for such securities may continue to expand as a result of this regulation and the consequent existence of the PORTAL system, which is an automated system for the trading, clearance and settlement of unregistered securities of domestic and foreign issuers sponsored by NASDAQ.

Under guidelines adopted by the Trust's Board, the Adviser of the Funds may determine that particular Rule 144A securities, and commercial paper issued in reliance on the private placement exemption from registration afforded by Section 4(a)(2) of the Securities Act, are liquid even though they are not registered. A determination of whether such a security is liquid or not is a question of fact. In making this determination, the Adviser will consider, as it deems appropriate under the circumstances and among other factors: (1) the frequency of trades and quotes for the security; (2) the number of dealers willing to purchase or sell the security; (3) the number of other potential purchasers of the security; (4) dealer undertakings to make a market in the security; (5) the nature of the security (e.g., debt or equity, date of maturity, terms of dividend or interest payments, and other material terms) and the nature of the marketplace trades (e.g., the time needed to dispose of the security, the method of soliciting offers, and the mechanics of transfer); and (6) the rating of the security and the financial condition and prospects of the issuer. In the case of commercial paper, the Adviser will also determine that the paper (1) is not traded flat or in default as to principal and interest, and (2) is rated in one of the two highest rating categories by at least two National Statistical

Rating Organization ("NRSRO") or, if only one NRSRO rates the security, by that NRSRO, or, if the security is unrated, the Adviser determines that it is of equivalent quality.

Rule 144A securities and Section 4(a)(2) commercial paper that have been deemed liquid as described above will continue to be monitored by the Funds' Adviser to determine if the security is no longer liquid as the result of changed conditions. Investing in Rule 144A securities or Section 4(a)(2) commercial paper could have the effect of increasing the amount of the Funds' assets invested in illiquid securities if institutional buyers are unwilling to purchase such securities.

Investment Companies

The Funds may invest in investment companies such as open-end funds (mutual funds), closed-end funds, and exchange traded funds (also referred to as "Underlying Funds"). The 1940 Act provides that the mutual funds may not: (1) purchase more than 3% of an investment company's outstanding shares; (2) invest more than 5% of its assets in any single such investment company (the "5% Limit"), and (3) invest more than 10% of its assets in investment companies overall (the "10% Limit"), unless: (i) the underlying investment company and/or the Funds have received an order for exemptive relief from such limitations from the Securities and Exchange Commission ("SEC"); and (ii) the underlying investment company and the Funds take appropriate steps to comply with any conditions in such order.

In addition, Section 12(d)(1)(F) of the 1940 Act amended provides that the provisions of paragraph 12(d)(1) shall not apply to securities purchased or otherwise acquired by the Funds if (i) immediately after such purchase or acquisition not more than 3% of the total outstanding stock of such registered investment company is owned by the Funds and all affiliated persons of the Funds; and (ii) the Funds have not, and is not proposing to offer or sell any security issued by it through a principal underwriter or otherwise at a public or offering price which includes a sales load of more than 1 ½% percent. An investment company that issues shares to the Funds pursuant to paragraph 12(d)(1)(F) shall not be required to redeem its shares in an amount exceeding 1% of such investment company's total outstanding shares in any period of less than thirty days. The Funds (or the Adviser acting on behalf of the Funds) must comply with the following voting restrictions: when the Funds exercise voting rights, by proxy or otherwise, with respect to investment companies owned by the Funds, the Funds will either seek instruction from the Funds' shareholders with regard to the voting of all proxies and vote in accordance with such instructions, or vote the shares held by the Funds in the same proportion as the vote of all other holders of such security.

Further, the Funds if relying on Section 12(d)(1)(F), may rely on Rule 12d1-3, which allows unaffiliated mutual funds to exceed the 5% Limitation and the 10% Limitation, provided the aggregate sales loads any investor pays (i.e., the combined distribution expenses of both the acquiring fund and the acquired funds) does not exceed the limits on sales loads established by the NASD for funds of funds.

The Funds and any "affiliated persons," as defined by the 1940 Act, may purchase in the aggregate only up to 3% of the total outstanding securities of any Underlying Fund. Accordingly, when affiliated persons hold shares of any of the Underlying Funds, the Funds ability to invest fully in shares of those funds is restricted, and the Adviser must then, in some instances, select alternative investments that would not have been its first preference. The 1940 Act also provides that an Underlying Fund whose shares are purchased by the Funds will be obligated to redeem shares held by the Funds only in an amount up to 1% of the Underlying Fund's outstanding securities during any period of less than 30 days. Shares held by the Funds in excess of 1% of an Underlying Fund's outstanding securities therefore, will be considered not readily marketable securities, which, together with other such securities, may not exceed 15% of each Fund's total assets.

Under certain circumstances an Underlying Fund may determine to make payment of a redemption by the Funds wholly or partly by a distribution in kind of securities from its portfolio, in lieu of cash, in conformity with the rules of the SEC. In such cases, the Funds may hold securities distributed by an Underlying Fund until the Adviser determines that it is appropriate to dispose of such securities.

Investment decisions by the investment advisers of the Underlying Funds are made independently of the Funds and the Adviser. Therefore, the investment adviser of one Underlying Fund may be purchasing shares of the same issuer whose shares are being sold by the investment adviser of another such fund. The result would be an indirect expense to the Funds without accomplishing any investment purpose. Because other investment companies employ an investment adviser, such investments by the Funds may cause shareholders to bear duplicate fees.

Closed-End Investment Companies. The Funds may invest its assets in "closed-end" investment companies (or "closed-end funds"), subject to the investment restrictions set forth above. Shares of closed-end funds are typically offered to the public in a one-time initial public offering by a group of underwriters who retain a spread or underwriting commission of between 4% or 6% of the initial public offering price. Such securities are then listed for trading on the New York Stock Exchange and the National Association of Securities Dealers Automated Quotation System (commonly known as "NASDAQ") and, in some cases, may be traded in other over-the-counter markets. Because the shares of closed-end funds cannot be redeemed upon demand to the issuer like the shares of an open-end investment company (such as the Funds), investors seek to buy and sell shares of closed-end funds in the secondary market.

The Funds generally will purchase shares of closed-end funds only in the secondary market. The Funds will incur normal brokerage costs on such purchases similar to the expenses the Funds would incur for the purchase of securities of any other type of issuer in the secondary market. The Funds may, however, also purchase securities of a closed-end fund in an initial public offering when, in the opinion of the Adviser, based on a consideration of the nature of the closed-end fund's proposed investments, the prevailing market conditions and the level of demand for such securities, they represent an attractive opportunity for growth of capital. The initial offering price typically will include a dealer spread, which may be higher than the applicable brokerage cost if the Funds purchased such securities in the secondary market.

The shares of many closed-end funds, after their initial public offering, frequently trade at a price per share that is less than the net asset value per share, the difference representing the "market discount" of such shares. This market discount may be due in part to the investment objective of long-term appreciation, which is sought by many closed-end funds, as well as to the fact that the shares of closed-end funds are not redeemable by the holder upon demand to the issuer at the next determined net asset value but rather are subject to the principles of supply and demand in the secondary market. A relative lack of secondary market purchasers of closed-end fund shares also may contribute to such shares trading at a discount to their net asset value.

The Funds may invest in shares of closed-end funds that are trading at a discount to net asset value or at a premium to net asset value. There can be no assurance that the market discount on shares of any closed-end fund purchased by the Funds will ever decrease. In fact, it is possible that this market discount may increase and the Funds may suffer realized or unrealized capital losses due to further decline in the market price of the securities of such closed-end funds, thereby adversely affecting the net asset value of a Fund's shares. Similarly, there can be no assurance that any shares of a closed-end fund purchased by the Funds at a premium will continue to trade at a premium or that the premium will not decrease subsequent to a purchase of such shares by the Funds.

Closed-end funds may issue senior securities (including preferred stock and debt obligations) for the purpose of leveraging the closed-end fund's common shares in an attempt to enhance the current return to such closed-end fund's common shareholders. Each Fund's investment in the common shares of closed-end funds that are financially leveraged may create an opportunity for greater total return on its investment, but at the same time may be expected to exhibit more volatility in market price and net asset value than an investment in shares of investment companies without a leveraged capital structure.

Exchange Traded Funds. ETFs are actively managed funds, or passive funds that track their related index. They are managed by professionals and provide the investor with diversification, cost and tax efficiency, liquidity, marginability, are useful for hedging, have the ability to go long and short, and some provide quarterly dividends. Additionally, some ETFs are unit investment trusts ("UITs"), which are unmanaged portfolios overseen by trustees and some ETFs may be grantor trusts. An ETF typically holds a portfolio of securities or contracts designed to track a particular market segment or index. Some examples of ETFs are Rydex Shares™, ProShares®, SPDRs®, streetTRACKS, DIAMONDSSM, NASDAQ 100 Index Tracking StockSM ("QQQsSM"), and iShares®. The Funds expect to use ETFs as part of their overall investment strategy and as part of its hedging strategy. To offset the risk of declining security prices, the Funds may invest in inverse ETFs. Inverse ETFs are funds designed to rise in price when stock prices are falling. Additionally, inverse ETFs may employ leverage which magnifies the changes in the underlying stock index upon which they are based. Inverse ETF index funds seek to provide investment results that will match a certain percentage of the inverse of the performance of a specific benchmark on a daily basis. For example, if an inverse ETFs current benchmark is 200% of the inverse of the Russell 2000 Index and the ETF meets its objective, the value of the ETF will tend to increase on a daily basis when the value of the underlying index decreases (e.g., if the Russell 2000 Index goes down 5% then the inverse ETF's value should go up 10%). ETFs generally have two markets. The primary market is where institutions swap "creation units" in block-multiples of 50,000 shares for in-kind securities and cash in the form of dividends. The secondary market is where individual investors can trade as little as a single share during trading hours on the exchange. This is different from open-ended mutual funds that are traded after hours once the net asset value (NAV) is calculated. ETFs share many similar risks with open-end and closed-end funds.

There is a risk that an ETF in which the Funds invest may terminate due to extraordinary events that may cause any of the service providers to the ETF, such as the trustee or sponsor, to close or otherwise fail to perform their obligations to the ETF. Also, because the ETFs in which the Funds intend to principally invest may be granted licenses by agreement to use the indices as a basis for determining their compositions and/or otherwise to use certain trade names, the ETFs may terminate if such license agreements are terminated. In addition, an ETF may terminate if its entire net asset value falls below a certain amount. Although the Funds believe that, in the event of the termination of an underlying ETF, it will be able to invest instead in shares of an alternate ETF tracking the same market index or another market index with the same general market, there is no guarantee that shares of an alternate ETF would be available for investment at that time. To the extent the Funds invest in a sector product, the Funds are subject to the risks associated with that sector.

The Funds could also purchase an ETF to temporarily gain exposure to a portion of the U.S. or foreign market while awaiting an opportunity to purchase securities directly. The risks of owning an ETF generally reflect the risks of owning the underlying securities they are designed to track, although lack of liquidity in an ETF could result in it being more volatile than the underlying portfolio of securities and ETFs have management fees that increase their costs versus the costs of owning the underlying securities directly.

ETFs are listed on national stock exchanges and are traded like stocks listed on an exchange. ETF shares may trade at a discount or a premium in market price if there is a limited market in such shares. Investments in ETFs are subject to brokerage and other trading costs, which could result in greater expenses to the Funds. ETFs also are subject to investment advisory and other expenses, which will be indirectly paid by the Funds. As a result, your cost of investing in the Funds will be higher than the cost of investing directly in ETFs and may be higher than other mutual funds that invest exclusively in stocks and bonds. You will indirectly bear fees and expenses charged by the ETFs in addition to a Fund's direct fees and expenses. Finally, because the value of ETF shares depends on the demand in the market, the Adviser may not be able to liquidate a Fund's holdings at the most optimal time, adversely affecting a Fund's performance.

ETFs may also include high beta index funds ("HBIFs"), which track an index by investing in leveraged instruments such as equity index swaps, futures contracts and options on securities, futures contracts, and stock indices. HBIFs are more volatile than the benchmark index they track and typically don't invest directly in the securities included in the benchmark, or in the same proportion that those securities are represented in that benchmark. On a day-to-day basis, HBIFs will target a volatility that is a specific percentage of the volatility of the underlying index. HBIFs seek to provide investment results that will match a certain percentage greater than 100% of the performance of a specific benchmark on a daily basis. For example, if an HBIF's current benchmark is 200% of the S&P 500 Index and it meets its objective, the value of the HBIF will tend to increase on a daily basis 200% of any increase in the underlying index (if the S&P 500 Index goes up 5% then the HBIF's value should go up 10%). When the value of the underlying index declines, the value of the HBIF's shares should also decrease on a daily basis by 200% of the value of any decrease in the underlying index (if the S&P 500 Index goes down 5% then the value of the HBIF should go down 10%).

Lending Portfolio Securities

For the purpose of achieving income, the Funds may lend its portfolio securities, provided (1) the loan is secured continuously by collateral consisting of U.S. Government securities or cash or cash equivalents (cash, U.S. Government securities, negotiable certificates of deposit, bankers' acceptances or letters of credit) maintained on a daily mark-to-market basis in an amount at least equal to the current market value of the securities loaned, (2) the Funds may at any time call the loan and obtain the return of securities loaned, (3) the Funds will receive any interest or dividends received on the loaned securities, and (4) the aggregate value of the securities loaned will not at any time exceed one-third of the total assets of the Funds.

Repurchase Agreements

The Funds may enter into repurchase agreements. In a repurchase agreement, an investor (such as the Funds) purchases a security (known as the "underlying security") from a securities dealer or bank. Any such dealer or bank must be deemed creditworthy by the Adviser. At that time, the bank or securities dealer agrees to repurchase the underlying security at a mutually agreed upon price on a designated future date. The repurchase price may be higher than the purchase price, the difference being income to the Funds, or the purchase and repurchase prices may be the same, with interest at an agreed upon rate due to the Funds on repurchase. In either case, the income to the Funds generally will be unrelated to the interest rate on

the underlying securities. Repurchase agreements must be "fully collateralized," in that the market value of the underlying securities (including accrued interest) must at all times be equal to or greater than the repurchase price. Therefore, a repurchase agreement can be considered a loan collateralized by the underlying securities.

Repurchase agreements are generally for a short period of time, often less than a week, and will generally be used by the Funds to invest excess cash or as part of a temporary defensive strategy. Repurchase agreements that do not provide for payment within seven days will be treated as illiquid securities. In the event of a bankruptcy or other default by the seller of a repurchase agreement, the Funds could experience both delays in liquidating the underlying security and losses. These losses could result from: (a) possible decline in the value of the underlying security while the Funds are seeking to enforce its rights under the repurchase agreement; (b) possible reduced levels of income or lack of access to income during this period; and (c) expenses of enforcing its rights.

When-Issued, Forward Commitments and Delayed Settlements

The Funds may purchase and sell securities on a when-issued, forward commitment or delayed settlement basis. In this event, the Custodian (as defined under the section entitled "Custodian") will segregate liquid assets equal to the amount of the commitment in a separate account. Normally, the Custodian will set aside portfolio securities to satisfy a purchase commitment. In such a case, the Funds may be required subsequently to segregate additional assets in order to assure that the value of the account remains equal to the amount of a Fund's commitment. It may be expected that a Fund's net assets will fluctuate to a greater degree when it sets aside portfolio securities to cover such purchase commitments than when it sets aside cash.

The Funds do not intend to engage in these transactions for speculative purposes but only in furtherance of its investment objectives. Because the Funds will segregate liquid assets to satisfy its purchase commitments in the manner described, a Fund's liquidity and the ability of the Adviser to manage them may be affected in the event a Fund's forward commitments, commitments to purchase when-issued securities and delayed settlements ever exceeded 15% of the value of its net assets.

The Funds will purchase securities on a when-issued, forward commitment or delayed settlement basis only with the intention of completing the transaction. If deemed advisable as a matter of investment strategy, however, the Funds may dispose of or renegotiate a commitment after it is entered into, and may sell securities it has committed to purchase before those securities are delivered to the Funds on the settlement date. In these cases the Funds may realize a taxable capital gain or loss. When the Funds engage in when-issued, forward commitment and delayed settlement transactions, it relies on the other party to consummate the trade. Failure of such party to do so may result in the Funds incurring a loss or missing an opportunity to obtain a price credited to be advantageous.

The market value of the securities underlying a when-issued purchase, forward commitment to purchase securities, or a delayed settlement and any subsequent fluctuations in their market value is taken into account when determining the market value of the Funds starting on the day the Funds agree to purchase the securities. The Funds do not earn interest on the securities it has committed to purchase until it has paid for and delivered on the settlement date.

Short Sales

The Funds may sell securities short. A short sale is a transaction in which a Fund sells a security it does not own or have the right to acquire (or that it owns but does not wish to deliver) in anticipation that the market price of that security will decline.

When a Fund makes a short sale, the broker-dealer through which the short sale is made must borrow the security sold short and deliver it to the party purchasing the security. The Funds are required to make a margin deposit in connection with such short sales; the Funds may have to pay a fee to borrow particular securities and will often be obligated to pay over any dividends and accrued interest on borrowed securities.

If the price of the security sold short increases between the time of the short sale and the time the Funds cover its short position, the Funds will incur a loss; conversely, if the price declines, the Funds will realize a capital gain. Any gain will be decreased, and any loss increased, by the transaction costs described above. The successful use of short selling may be adversely affected by imperfect correlation between movements in the price of the security sold short and the securities being hedged.

To the extent a Fund sells securities short, it will provide collateral to the broker-dealer and (except in the case of short sales "against the box") will maintain additional asset coverage in the form of cash, U.S. government securities or other liquid securities with its custodian in a segregated account in an amount at least equal to the difference between the current market value of the securities sold short and any amounts required to be deposited as collateral with the selling broker (not including the proceeds of the short sale). The Funds do not intend to enter into short sales (other than short sales "against the box") if immediately after such sales the aggregate of the value of all collateral plus the amount in such segregated account exceeds 50% of the value of a Fund's net assets. This percentage may be varied by action of the Board of Trustees. A short sale is "against the box" to the extent the Funds contemporaneously owns or has the right to obtain at no added cost, securities identical to those sold short.

INVESTMENT RESTRICTIONS

The Funds have adopted the following investment restrictions that may not be changed without approval by a "majority of the outstanding shares" of the Funds which, as used in this SAI, means the vote of the lesser of (a) 67% or more of the shares of the Funds represented at a meeting, if the holders of more than 50% of the outstanding shares of the Funds are present or represented by proxy, or (b) more than 50% of the outstanding shares of the Funds.

1. Borrowing Money. The Funds will not borrow money, except: (a) from a bank, provided that immediately after such borrowing there is an asset coverage of 300% for all borrowings of the Funds; or (b) from a bank or other persons for temporary purposes only, provided that such temporary borrowings are in an amount not exceeding 5% of a Fund's total assets at the time when the borrowing is made.

2. Senior Securities. The Funds will not issue senior securities. This limitation is not applicable to activities that may be deemed to involve the issuance or sale of a senior security by the Funds, provided that a Fund's engagement in such activities is consistent with or permitted by the 1940 Act the rules and regulations promulgated thereunder or interpretations of the SEC or its staff.

3. Underwriting. The Funds will not act as underwriter of securities issued by other persons. This limitation is not applicable to the extent that, in connection with the disposition of portfolio securities (including restricted securities), the Funds may be deemed an underwriter under certain federal securities laws.

4. Real Estate. The Funds will not purchase or sell real estate. This limitation is not applicable to investments in marketable securities that are secured by or represent interests in real estate. This limitation does not preclude the Funds from investing in mortgage-related securities or investing in companies engaged in the real estate business or that have a significant portion of their assets in real estate (including real estate investment trusts).

5. Commodities. The Funds will not purchase or sell commodities unless acquired as a result of ownership of securities or other investments. This limitation does not preclude the Funds from purchasing or selling options or futures contracts, from investing in securities or other instruments backed by commodities or from investing in companies which are engaged in a commodities business or have a significant portion of their assets in commodities.

6. Loans. The Funds will not make loans to other persons, except: (a) by loaning portfolio securities; (b) by engaging in repurchase agreements; or (c) by purchasing nonpublicly offered debt securities. For purposes of this limitation, the term "loans" shall not include the purchase of a portion of an issue of publicly distributed bonds, debentures or other securities.

7. Concentration. The Funds will not invest 25% or more of its total assets in a particular industry or group of industries. The Funds will not invest 25% or more of its total assets in any investment company that concentrates. This limitation is not applicable to investments in obligations issued or guaranteed by the U.S. government, its agencies and instrumentalities or repurchase agreements with respect thereto.

THE FOLLOWING ARE ADDITIONAL INVESTMENT LIMITATIONS OF THE FUNDS. THE FOLLOWING RESTRICTIONS ARE DESIGNATED AS NON-FUNDAMENTAL AND MAY BE CHANGED BY THE BOARD OF TRUSTEES OF THE TRUST WITHOUT THE APPROVAL OF SHAREHOLDERS.

1. Pledging. The Funds will not mortgage, pledge, hypothecate or in any manner transfer, as security for indebtedness, any assets of the Funds except as may be necessary in connection with borrowings described in limitation (1) above. Margin deposits, security interests, liens and collateral arrangements with respect to transactions involving options, futures contracts, short sales and other permitted investments and techniques are not deemed to be a mortgage, pledge or hypothecation of assets for purposes of this limitation.

2. Borrowing. The Funds will not purchase any security while borrowings representing more than one third of its total assets are outstanding.

3. Margin Purchases. The Funds will not purchase securities or evidences of interest thereon on "margin." This limitation is not applicable to short-term credit obtained by a Fund for the clearance of purchases and sales or redemption of securities, or to arrangements with respect to transactions involving options, futures contracts, short sales and other permitted investment techniques.

4. Illiquid Investments. The Funds will not hold 15% or more of its net assets in securities for which there are legal or contractual restrictions on resale and other illiquid securities.

If a restriction on a Fund's investments is adhered to at the time an investment is made, a subsequent change in the percentage of a Fund assets invested in certain securities or other instruments, or change in average duration of a Fund's investment portfolio, resulting from changes in the value of a Fund's total assets, will not be considered a violation of the restriction; provided, however, that the asset coverage requirement applicable to borrowings shall be maintained in the manner contemplated by applicable law.

With respect to interpretations of the SEC or its staff described in fundamental restriction number 2 above, the SEC and its staff have identified various securities trading practices and derivative instruments used by mutual funds that give rise to potential senior security issues under Section 18(f) of the 1940 Act, which prohibits mutual funds from issuing senior securities. Under the 1940 Act, a mutual fund may borrow from a bank, provided that immediately after any such borrowing there is an asset coverage of at least 300 percent for all borrowings; or from a bank or other persons for temporary purposes only, provided that such temporary borrowings are in an amount not exceeding 5% of a Fund's total assets at the time when the borrowing is made. However, rather than rigidly deeming all such practices outside of bank borrowing as impermissible forms of issuing a "senior security" under Section 18(f), the SEC and its staff through interpretive releases, including Investment Company Act Release No. 10666 (April 18, 1979), and no-action letters has developed an evolving series of methods by which a fund may address senior security issues. In particular, the common theme in this line of guidance has been to use methods of "covering" fund obligations that might otherwise create a senior security-type obligation by holding sufficient liquid assets that permit a fund to meet potential trading and derivative-related obligations. Thus, a potential Section 18(f) senior security limitation is not applicable to activities that might be deemed to involve a form of the issuance or sale of a senior security by the Funds, provided that a Fund's engagement in such activities is consistent with or permitted by Section 18 of the 1940 Act, the rules and regulations promulgated thereunder or interpretations of the SEC or its staff.

POLICIES AND PROCEDURES FOR DISCLOSURE OF PORTFOLIO HOLDINGS

The Trust has adopted policies and procedures that govern the disclosure of a Fund's portfolio holdings. These policies and procedures are designed to ensure that such disclosure is in the best interests of each Fund's shareholders.

It is the Trust's policy to: (1) ensure that any disclosure of portfolio holdings information is in the best interest of Trust shareholders; (2) protect the confidentiality of portfolio holdings information; (3) have procedures in place to guard against personal trading based on the information; and (4) ensure that the disclosure of portfolio holdings information does not create conflicts between the interests of the Trust's shareholders and those of the Trust's affiliates.

The Funds will disclose their portfolio holdings by mailing its annual and semi-annual reports to shareholders approximately two months after the end of the fiscal year and semi-annual period. The Funds may also disclose their portfolio holdings by mailing a quarterly report to its shareholders. In addition, the Funds will disclose their portfolio holdings reports on Forms N-CSR and Form N-PORT two months after the end of each quarter/semi-annual period.

The Funds may, from time to time, make available month-end portfolio holdings information on the website www.zeo.com. If month-end portfolio holdings information are available on the website, the information is expected to be approximately 30 days old and remain available until new information for the next month is available. Shareholders may request publicly available portfolio holdings schedules at no charge by calling 1-855-ZEO-FUND.

The Funds may choose to make available to rating agencies such as Lipper, Morningstar or Bloomberg earlier and more frequently on a confidential basis.

Under limited circumstances, as described below, a Fund's portfolio holdings may be disclosed to, or known by, certain third parties in advance of their filing with the Securities and Exchange Commission on Form N-CSR or Form N-PORT. In each case, a determination has been made that such advance disclosure is supported by a legitimate business purpose and that the recipient is subject to a duty to keep the information confidential and to not trade on any material nonpublic information.

- **The Adviser.** Personnel of the Adviser, including personnel responsible for managing a Fund's portfolio, may have full daily access to each Fund's portfolio holdings because that information is necessary in order for the Adviser to provide its management, administrative, and investment services to the Funds. As required for purposes of analyzing the impact of existing and future market changes on the prices, availability, demand and liquidity of such securities, as well as for the assistance of portfolio manager in the trading of such securities, Adviser personnel may also release and discuss certain portfolio holdings with various broker-dealers.
- **Gemini Fund Services, LLC.** Gemini Fund Services, LLC is the transfer agent, fund accountant and administrator for the Funds; therefore, its personnel have full daily access to a Fund's portfolio holdings because that information is necessary in order for them to provide the agreed-upon services for the Trust.
- **U.S. Bank.** U.S. Bank is the custodian for the Funds; therefore, its personnel have full daily access to a Fund's portfolio holdings because that information is necessary in order for them to provide the agreed-upon services for the Funds.
- **Cohen & Company, Ltd.** Cohen & Company, Ltd. is the Funds' independent registered public accounting firm; therefore, its personnel have access to the Funds' portfolio holdings in connection with auditing of the Funds' annual financial statements and providing assistance and consultation in connection with SEC filings.
- **Thompson Hine LLP.** Thompson Hine LLP is counsel to the Funds; therefore its personnel have access to the Funds' portfolio holdings in connection with the review of the Funds' annual and semi-annual shareholder reports and SEC filings.
- **Counsel to the Independent Trustees.** Counsel to the Independent Trustees and its personnel have access to the Funds' portfolio holdings in connection with review of the Funds' annual and semi-annual shareholder reports and SEC filings.

Additions to List of Approved Recipients. The Trust's Chief Compliance Officer is the person responsible, and whose prior approval is required, for any disclosure of the Funds' portfolio securities at any time or to any persons other than those described above. In such cases, the recipient must have a legitimate business need for the information and must be subject to a duty to keep the information confidential and to not trade on any material nonpublic information. There are no ongoing arrangements in place with respect to the disclosure of portfolio holdings. In no event shall the Funds, the Adviser or any other party receive any direct or indirect compensation in connection with the disclosure of information about the Funds' portfolio holdings.

Compliance with Portfolio Holdings Disclosure Procedures. The Trust's Chief Compliance Officer will report periodically to the Board with respect to compliance with the Funds' portfolio holdings disclosure procedures, and from time to time will provide the Board any updates to the portfolio holdings disclosure policies and procedures.

There is no assurance that the Trust's policies on disclosure of portfolio holdings will protect the Funds from the potential misuse of holdings information by individuals or firms in possession of that information.

MANAGEMENT

The business of the Trust is managed under the direction of the Board in accordance with the Agreement and Declaration of Trust and the Trust's By-laws (the "Governing Documents"), which have been filed with the Securities and Exchange Commission and are available upon request. The Board consists of six (6) Trustees who are not "interested persons" (as defined under the 1940 Act) of the Trust or any investment adviser to any series of the Trust ("Independent Trustees"). Pursuant to the Governing Documents of the Trust, the Trustees shall elect officers including a President, a Secretary, a Treasurer, a Principal Executive Officer and a Principal Accounting Officer. The Board retains the power to conduct, operate and carry on the business of the Trust and has the power to incur and pay any expenses, which, in the opinion of the Board, are necessary or incidental to carry out any of the Trust's purposes. The Trustees, officers, employees and agents of the Trust, when acting in such capacities, shall not be subject to any personal liability except for his or her own bad faith, willful misfeasance, gross negligence or reckless disregard of his or her duties.

Board Leadership Structure

The Trust is led by Anthony Hertl, an Independent Trustee, who has served as the Chairman of the Board since July 2013. The Board of Trustees is comprised of Mr. Hertl and five (5) additional Independent Trustees. Additionally, under certain 1940 Act governance guidelines that apply to the Trust, the Independent Trustees will meet in executive session, at least quarterly. Under the Trust's Governing Documents, the Chairman of the Board is responsible for (a) presiding at Board meetings, (b) calling special meetings on an as-needed basis, (c) execution and administration of Trust policies including (i) setting the agendas for Board meetings and (ii) providing information to Board members in advance of each Board meeting and between Board meetings. Generally, the Trust believes it best to have a non-executive Chairman of the Board, who together with the President (principal executive officer), are seen by its shareholders, business partners and other stakeholders as providing strong leadership. The Trust believes that its Chairman, the independent chair of the Audit Committee, and, as an entity, the full Board of Trustees, provide effective leadership that is in the best interests of the Trust, its Funds and each shareholder.

Board Risk Oversight

The Board of Trustees has a standing independent Audit Committee with a separate chair, Mark H. Taylor. The Board is responsible for overseeing risk management, and the full Board regularly engages in discussions of risk management and receives compliance reports that inform its oversight of risk management from its Chief Compliance Officer at quarterly meetings and on an ad hoc basis, when and if necessary. The Audit Committee considers financial and reporting risk within its area of responsibilities. Generally, the Board believes that its oversight of material risks is adequately maintained through the compliance-reporting chain where the Chief Compliance Officer is the primary recipient and communicator of such risk-related information.

Trustee Qualifications

Generally, the Trust believes that each Trustee is competent to serve because of their individual overall merits including: (i) experience, (ii) qualifications, (iii) attributes and (iv) skills.

Anthony J. Hertl has over 20 years of business experience in the financial services industry and related fields including serving as chair of the finance committee for the Borough of Interlaken, New Jersey and Vice President-Finance and Administration of Marymount College, holds a Certified Public Accountant designation, serves or has served as a member of other mutual fund boards outside of the group of Funds managed by the Adviser (the "Fund Complex") and possesses a strong understanding of the regulatory framework under which investment companies must operate based on his years of service to this Board and other fund boards.

Gary W. Lanzen has over 20 years of business experience in the financial services industry, holds a Master’s degree in Education Administration, is a Certified Financial Planner, serves as a member of two other mutual fund boards outside of the Fund Complex and possesses a strong understanding of the regulatory framework under which investment companies must operate based on his years of service to this Board and other mutual fund boards.

Mark H. Taylor has over two decades of academic and professional experience in the accounting and auditing areas, has Doctor of Philosophy, Master’s and Bachelor’s degrees in Accounting, is a Certified Public Accountant and is a Director of the Lynn Pippenger School of Accountancy, Muma College of Business, University of South Florida, Tampa FL. He serves as a member of two other mutual fund boards outside of the Fund Complex, has served a fellowship in the Office of the Chief Accountant at the headquarters of the United States Securities Exchange Commission, served a three-year term on the AICPA Auditing Standards Board (2008-2011), and like the other Board members, possesses a strong understanding of the regulatory framework under which investment companies must operate based on his years of service to this Board and other mutual fund boards.

John V. Palancia has over 30 years of business experience in financial services industry including serving as the Director of Futures Operations for Merrill Lynch, Pierce, Fenner & Smith, Inc. Mr. Palancia holds a Bachelor of Science degree in Economics. He also possesses a strong understanding of risk management, balance sheet analysis and the regulatory framework under which regulated financial entities must operate based on service to Merrill Lynch. Additionally, he is well versed in the regulatory framework under which investment companies must operate and serves as a member of three other fund boards.

Mark D. Gersten has more than 30 years of experience in the financial services industry, having served in executive roles at AllianceBernstein LP and holding key industry positions at Prudential-Bache Securities and PriceWaterhouseCoopers. He also serves as a member of two other mutual fund boards outside of the Fund Complex. Mr. Gersten is a certified public accountant and holds an MBA in accounting. Like other Trustees, his experience has given him a strong understanding of the regulatory framework under which investment companies operate.

Mark S. Garbin has more than 30 years of experience in corporate balance sheet and income statement risk management for large asset managers, serving as Managing Principal of Coherent Capital Management LLC since 2007. Mr. Garbin has extensive derivatives experience and has provided consulting services to alternative asset managers. He is both a Chartered Financial Analyst and Professional Risk Manager charterholder and holds advanced degrees in international business. The Trust does not believe any one factor is determinative in assessing a Trustee's qualifications, but that the collective experience of each Trustee makes them each highly qualified.

The Trustees and the executive officers of the Trust are listed below with their present positions with the Trust and principal occupations over at least the last five years. The business address of each Trustee and Officer is 225 Pictoria Drive, Suite 450, Cincinnati, OH 45246. All correspondence to the Trustees and Officers should be directed to c/o Gemini Fund Services, LLC, P.O. Box 541150, Omaha, Nebraska 68154.

Independent Trustees

Name, Address and Year of Birth	Position/Term of Office*	Principal Occupation During the Past Five Years	Number of Portfolios in Fund Complex** Overseen by Trustee	Other Directorships held by Trustee During the Past Five Years

Nanosky Born in 1966	Chief Compliance Officer Since January 2021	Chief Compliance Officer, of the Trust (since January 2021); Vice President-Senior Compliance Officer, Ultimus Fund Solutions (since 2020); Vice President, Chief Compliance Officer for Williamsburg Investment Trust (2020-current); Senior Vice President- Chief Compliance Officer, PNC Funds (2014-2019).	N/A	N/A

*The term of office for each Trustee and officer listed above will continue indefinitely until the individual resigns or is removed.

**As of July 31, 2021, the Trust was comprised of 68 active portfolios managed by unaffiliated investment advisers. The term "Fund Complex" applies only to the Funds in the Trust advised by the Adviser. The Funds do not hold themselves out as related to any other series within the Trust that is not advised by the Adviser.

Board Committees

Audit Committee

The Board has an Audit Committee that consists of all the Trustees who are not "interested persons" of the Trust within the meaning of the 1940 Act. The Audit Committee's responsibilities include: (i) recommending to the Board the selection, retention or termination of the Trust's independent auditors; (ii) reviewing with the independent auditors the scope, performance and anticipated cost of their audit; (iii) discussing with the independent auditors certain matters relating to the Trust's financial statements, including any adjustment to such financial statements recommended by such independent auditors, or any other results of any audit; (iv) reviewing on a periodic basis a formal written statement from the independent auditors with respect to their independence, discussing with the independent auditors any relationships or services disclosed in the statement that may impact the objectivity and independence of the Trust's independent auditors and recommending that the Board take appropriate action in response thereto to satisfy itself of the auditor's independence; and (v) considering the comments of the independent auditors and management's responses thereto with respect to the quality and adequacy of the Trust's accounting and financial reporting policies and practices and internal controls. The Audit Committee operates pursuant to an Audit Committee Charter. The Audit Committee is responsible for seeking and reviewing nominee candidates for consideration as Independent Trustees as is from time to time considered necessary or appropriate. The Audit Committee generally will not consider shareholder nominees. The Audit Committee is also responsible for reviewing and setting Independent Trustee compensation from time to time when considered necessary or appropriate. During the past fiscal year, the Audit Committee held twelve meetings.

Compensation

Effective July 1, 2021, each Trustee who is not affiliated with the Trust or an investment adviser to any series of the Trust will receive a quarterly fee of \$48,750, allocated among each of the various portfolios comprising the Trust and Northern Lights Variable Trust (together, the "Trusts"), a separate registrant that shares a common board with the Trust, for his attendance at the regularly scheduled meetings of the Board, to be paid in advance of each calendar quarter, as well as reimbursement for any reasonable expenses incurred. In addition to which, the Chairman of the Board receives a quarterly fee of \$13,750 and the Audit Committee Chairman receives a quarterly fee of \$10,000.

Prior to July 1, 2021, each Trustee who was not affiliated with the Trusts or an investment adviser to any series of the Trusts received a quarterly fee of \$46,250, allocated among each of the various portfolios comprising the Trusts. In addition to the quarterly fees and reimbursements, the Chairman of the Board previously received a quarterly fee of \$11,250 and the Audit Committee Chairman receives a quarterly fee of \$8,750.

Additionally, in the event a meeting of the Board of Trustees other than its regularly scheduled meetings (a "Special Meeting") is required, each Independent Trustee will receive a fee of \$2,500 per Special Meeting, as well as reimbursement for any reasonable expenses incurred, to be paid by the relevant series of the applicable Trust or its investment adviser depending on the circumstances necessitating the Special Meeting.

None of the executive officers receive compensation from the Trust.

The table below details the amount of compensation the Trustees received from the Trust during the fiscal year ended April 30, 2021. Each Independent Trustee attended all quarterly meetings during the period. The Trust does not have a bonus, profit sharing, pension or retirement plan.

Name and Position	Zeo Short Duration Income Fund	Zeo Sustainable Credit Fund	Pension or Retirement Benefits Accrued as Part of Funds Expenses	Estimated Annual Benefits Upon Retirement	Total Compensation from Fund Complex* Paid to Trustees
Anthony J. Hertl	\$2,734	\$2,734	None	None	\$5,468
Gary Lanzen	\$2,302	\$2,302	None	None	\$4,605
Mark Taylor	\$2,446	\$2,446	None	None	\$4,892
John V. Palancia	\$2,302	\$2,302	None	None	\$4,605
Mark D. Gersten	\$2,302	\$2,302	None	None	\$4,605
Mark Garbin	\$2,302	\$2,302	None	None	\$4,605

* The term "Fund Complex" includes series of the Northern Lights Fund Trust ("NLFT") that are advised by the adviser.

Trustee Ownership

The following table indicates the dollar range of equity securities that each Trustee beneficially owned in the Funds as of December 31, 2020.

Name of Trustee	Dollar Range of Equity Securities in the Funds	Aggregate Dollar Range of Equity Securities in All Registered Investment Companies Overseen by Trustee in Family of Investment Companies
Anthony J. Hertl	\$50,000-\$100,000	\$50,000-\$100,000
Gary Lanzen	None	None
John V. Palancia	None	None
Mark Taylor	None	None
Mark D. Gersten	None	\$10,001-\$50,000
Mark Garbin	None	None

Management Ownership

As of August 2, 2021, the Trustees, as a group, owned less than 1.00% of either Funds' outstanding shares.

CONTROL PERSONS AND PRINCIPAL HOLDERS

A control person is one who owns beneficially or through controlled companies more than 25% of the voting securities of a company or acknowledged the existence of control. A shareholder who owns of record or beneficially more than 25% of the outstanding shares of a Fund or who is otherwise deemed to "control" a Fund may be able to determine or significantly influence the outcome of matters submitted to a vote of the Funds' shareholders.

As of August 2, 2021, the following shareholders were considered to be either a control person or principal shareholder of the Funds:

Zeo Short Duration Income Fund Name and Address	Shares Owned	Percentage Held

INVESTMENT ADVISER

Zeo Capital Advisors, LLC, P.O. Box 18620, Oakland, CA 94619, serves as investment adviser to the Funds. The Adviser provides investment management services to individual investors and the Funds. The Adviser was established in February 2010. Subject to the oversight of the Board of Trustees, the Adviser manages each Fund's securities and investments in accordance with the Fund's stated investment objectives, policies and restrictions. The fee paid to the Adviser is governed by an investment advisory agreement ("Advisory Agreement") between the Trust, on behalf of the Funds, and the Adviser.

Under the Advisory Agreement, the Adviser, under the supervision of the Board, agrees to invest the assets of the Fund in accordance with applicable law and the investment objective, policies and restrictions set forth in the Funds' current Prospectus and Statement of Additional Information, and subject to such further limitations as the Trust may from time to time impose by written notice to the Adviser. The Adviser shall act as the investment adviser to the Funds and, as such shall (i) obtain and evaluate such information relating to the economy, industries, business, securities markets and securities as it may deem necessary or useful in discharging its responsibilities here under, (ii) formulate a continuing program for the investment of the assets of the Funds in a manner consistent with its investment objective, policies and restrictions, and (iii) determine from time to time securities to be purchased, sold, retained or lent by the Funds, and implement those decisions, including the selection of entities with or through which such purchases, sales or loans are to be effected; provided, that the Adviser will place orders pursuant to its investment determinations either directly with the issuer or with a broker or dealer, and if with a broker or dealer, (a) will attempt to obtain the best price and execution of its orders, and (b) may nevertheless in its discretion purchase and sell portfolio securities from and to brokers who provide the Adviser with research, analysis, advice and similar services and pay such brokers in return a higher commission or spread than may be charged by other brokers. The Adviser also provides the Funds with all necessary office facilities and personnel for servicing each Fund's investments, compensates all officers, Trustees and employees of the Trust who are officers, directors or employees of the Adviser, and all personnel of the Funds or the Adviser performing services relating to research, statistical and investment activities. The Advisory Agreement for the Funds were most recently renewed by the Board of the Trust, including a majority of the Independent Trustees, at a meeting held on March 23-25, 2021.

In addition, the Adviser, directly subject to the oversight of the Board, provides the management and administrative services necessary for the operation of the Funds. These services include providing facilities for maintaining the Trust's organization; supervising relations with custodians, transfer and pricing agents, accountants, underwriters and other persons dealing with the Funds; preparing all general shareholder communications and conducting shareholder relations; maintaining the Funds' records and the registration of the Funds' shares under federal securities laws and making necessary filings under state securities laws; developing management and shareholder services for the Funds; and furnishing reports, evaluations and analyses on a variety of subjects to the Trustees.

Pursuant to the Advisory Agreement between the Funds and the Adviser, the Adviser is entitled to receive, on a monthly basis, an annual advisory fee equal to 0.75% of each Fund's average daily net assets. The Fund's Adviser has contractually agreed to reduce its fees and/or absorb expenses of the Funds, until at least August 31, 2022 to ensure that total annual fund operating expenses after fee waiver and/or reimbursement (excluding any front-end or contingent deferred loads; brokerage fees and commissions; acquired fund fees and expenses; fees and expenses associated with investments in other collective investment vehicles or derivative instruments (including for example option and swap fees and expenses); borrowing costs (such as interest and dividend expense on securities sold short); taxes; expenses incurred in connection with any merger or reorganization, and extraordinary expenses, such as litigation expenses (which may include indemnification of Funds officers and Trustees and contractual indemnification of Fund service providers (other than the Adviser)) will not exceed 0.99% of the net assets for Class I shares. Waiver/reimbursement is subject to possible recoupment from the Funds in future years on a rolling three-year basis (within three years after the fees have been waived or reimbursed) if such recoupment can be achieved within the foregoing expense limits. No reimbursement amount will be paid to the Adviser in any fiscal quarter unless the Trust's Board of Trustees has determined in advance that a reimbursement is in the best interest of the Funds and its shareholders. Fee waiver and reimbursement arrangements can decrease the Funds' expenses and increase its performance. Prior to July 1, 2021 the expense limitation was 1.25% for each Fund.

During the fiscal year ended April 30, 2019, Short Duration paid the Adviser \$2,423,903 in investment advisory fees. During the fiscal year ended April 30, 2020, Short Duration paid the Adviser \$2,884,820 in investment advisory fees. During the fiscal year ended April 30, 2021, Short Duration paid the Adviser \$1,933,522 in investment advisory fees.

During the fiscal year ended April 30, 2020, Sustainable Credit accrued \$47,842 in advisory fees of which all advisory fees were waived, and the adviser reimbursed. During the fiscal year ended April 30, 2021, Sustainable Credit accrued \$113,376 in advisory fees of which \$62,233 were waived.

Expenses not expressly assumed by the Adviser under the Advisory Agreement are paid by the Funds. Under the terms of the Advisory Agreement, the Funds are responsible for the payment of the following expenses among others: (a) the fees payable to the Adviser, (b) the fees and expenses of Trustees who are not affiliated persons of the Adviser (c) the fees and certain expenses of the Custodian and Transfer and Dividend Disbursing Agent (as defined under the section entitled "Transfer Agent"), including the cost of maintaining certain required records of the Funds and of pricing a Fund's shares, (d) the charges and expenses of legal counsel and independent accountants for the Funds, (e) brokerage commissions and any issue or transfer taxes chargeable to the Funds in connection with its securities transactions, (f) all taxes and corporate fees payable by the Funds to governmental agencies, (g) the fees of any trade association of which the Funds may be a member, (h) the fees and expenses involved in registering and maintaining registration of the Funds and of its shares with the SEC, qualifying its shares under state securities laws, including the preparation and printing of a Fund's registration statements and prospectuses for such purposes, (i) all expenses of shareholders and Trustees' meetings (including travel expenses of Trustees and officers of the Funds who are directors, officers or employees of the Adviser) and of preparing, printing and mailing reports, proxy statements and prospectuses to shareholders in the amount necessary for distribution to the shareholders and (j) litigation and indemnification expenses and other extraordinary expenses not incurred in the ordinary course of a Fund's business.

The Advisory Agreement continued in effect for two (2) years initially and thereafter shall continue from year to year provided such continuance is approved at least annually by (a) a vote of the majority of the Independent Trustees, cast in person at a meeting specifically called for the purpose of voting on such approval and by (b) the majority vote of either all of the Trustees or the vote of a majority of the outstanding shares of each Fund. The Advisory Agreement may be terminated without penalty on 60 days' written notice by a vote of a majority of the Trustees or by the Adviser, or by holders of a majority of that Trust's outstanding shares. The Advisory Agreement shall terminate automatically in the event of its assignment.

Codes of Ethics

The Trust, the Adviser and the Distributor have each adopted codes of ethics (each a "Code") under Rule 17j-1 under the 1940 Act that govern the personal securities transactions of their board members, officers and employees who may have access to current trading information of the Trust. Under these codes of ethics, the Trustees are permitted to invest in securities that may also be purchased by the Funds.

In addition, the Trust has adopted a code of ethics (the "Code") that applies only to the Trust's executive officers to ensure that these officers promote professional conduct in the practice of corporate governance and management. The purpose behind these guidelines is to promote i) honest and ethical conduct, including the ethical handling of actual or apparent conflicts of interest between personal and professional relationships; ii) full, fair, accurate, timely, and understandable disclosure in reports and documents that the Trust files with, or submits to, the SEC and in other public communications made by the Funds; iii) compliance with applicable governmental laws, rule and regulations; iv) the prompt internal reporting of violations of this Code to an appropriate person or persons identified in the Code; and v) accountability for adherence to the Code.

Proxy Voting Policies

The Board has adopted Proxy Voting Policies and Procedures ("Policies") on behalf of the Trust, which delegate the responsibility for voting proxies of securities held by the Funds to the Adviser subject to the Board's continuing oversight. The Policies require that the Adviser vote proxies received in a manner consistent with the best interests of the Funds and its shareholders. The Policies also require the Adviser to present to the Board, at least annually, the Adviser's Proxy Policies and a

record of each proxy voted by the Adviser on behalf of the Funds, including a report on the resolution of all proxies identified by the Adviser as involving a conflict of interest. A copy of the Adviser's Proxy Voting Policies is attached hereto as Appendix A.

More information. Information regarding how the Funds voted proxies relating to portfolio securities held by the Funds during the most recent 12-month period ending June 30 will be available (1) without charge, upon request, by calling the Funds at 1-855-936-3863; and (2) on the SEC's website at <http://www.sec.gov>. In addition, a copy of the Funds' proxy voting policies and procedures are also available by calling 1-855-936-3863 and will be sent within three business days of receipt of a request.

DISTRIBUTION OF SHARES

Northern Lights Distributors, LLC, located at 4221 North 203rd Street, Suite 100, Elkhorn, Nebraska 68022-3474 (the "Distributor") serves as the principal underwriter and national distributor for the shares of the Funds pursuant to an Underwriting Agreement with the Trust (the "Underwriting Agreement"). The Distributor is registered as a broker-dealer under the Securities Exchange Act of 1934 and each state's securities laws and is a member of FINRA. The offering of the Funds' shares is continuous. The Underwriting Agreement provides that the Distributor, as agent in connection with the distribution of each Fund shares, will use reasonable efforts to facilitate the sale of the Funds' shares.

The Underwriting Agreement provides that, unless sooner terminated, it will continue in effect for two years initially and thereafter shall continue from year to year, subject to annual approval by (a) the Board or a vote of a majority of the outstanding shares, and (b) by a majority of the Trustees who are not interested persons of the Trust or of the Distributor by vote cast in person at a meeting called for the purpose of voting on such approval.

The Underwriting Agreement may be terminated by the Funds at any time, without the payment of any penalty, by vote of a majority of the entire Board of the Trust or by vote of a majority of the outstanding shares of the Funds on 60 days' written notice to the Distributor, or by the Distributor at any time, without the payment of any penalty, on 60 days' written notice to the Funds. The Underwriting Agreement will automatically terminate in the event of its assignment.

The Distributor may enter into selling agreements with broker-dealers that solicit orders for the sale of shares of the Funds and may allow concessions to dealers that sell shares of the Funds. The Distributor receives the portion of the sales charge on all direct initial investments in the Funds and on all investments in accounts with no designated dealer of record.

The following table sets forth the total compensation received by the Distributor from Short Duration during the fiscal period ended April 30, 2019:

<i>Fund</i>	<i>Net Underwriting Discounts and Commissions</i>	<i>Compensation on Redemptions and Repurchases</i>	<i>Brokerage Commissions</i>	<i>Other Compensation</i>
Zeo Short Duration Income Fund	\$0	\$0	\$0	*

*The Distributor received \$39,636 from the Adviser as compensation for its distribution services to the Fund

The following table sets forth the total compensation received by the Distributor from the Funds during the fiscal period ended April 30, 2020:

<i>Fund</i>	<i>Net Underwriting Discounts and Commissions</i>	<i>Compensation on Redemptions and Repurchases</i>	<i>Brokerage Commissions</i>	<i>Other Compensation</i>
Zeo Short Duration Income Fund	\$0	\$0	\$0	*
Zeo Sustainable Credit Fund	\$0	\$0	\$0	*

*The Distributor received \$39,236 from the Adviser as compensation for its distribution services to the Funds.

The following table sets forth the total compensation received by the Distributor from Short Duration during the fiscal period ended April 30, 2021:

<i>Fund</i>	<i>Net Underwriting Discounts and Commissions</i>	<i>Compensation on Redemptions and Repurchases</i>	<i>Brokerage Commissions</i>	<i>Other Compensation</i>
Zeo Short Duration Income Fund	\$0	\$0	\$0	*
Zeo Sustainable Credit Fund	\$0	\$0	\$0	*

*The Distributor received \$34,821 from the Adviser as compensation for its distribution services to the Fund

Rule 12b-1 Plan

The Trust, with respect to the Zeo Short Duration Income Fund, has adopted the Trust's Master Distribution and Shareholder Servicing Plan pursuant to Rule 12b-1 under the 1940 Act for the Fund's Class A shares (the "Plan") pursuant to which the Fund is authorized to pay distribution and shareholder servicing fee at the rate of up to 0.25% of Class A shares average net assets. Such fees are to be paid by the Fund monthly, or at such other intervals, as the Board shall determine. Such fees shall be based upon the Fund's average daily net assets during the preceding month and shall be calculated and accrued daily. The Fund may pay fees to the Distributor at a lesser rate, as agreed upon by the Board of Trustees of the Trust and the Distributor. The Plan authorizes payments to the Distributor to reimburse it and other parties for distribution and shareholder servicing expenses borne by the Distributor and other parties (the "Recipients") in the distribution of Fund shares. Other entities also receive the proceeds of contingent deferred sales charges imposed on certain redemptions of shares, which are separate and apart from payments made pursuant to the Plan.

The services to be provided by Recipients may include, but are not limited to, the following: assistance in the offering and sale of Fund shares and in other aspects of the marketing of the shares to clients or prospective clients of the respective recipients; answering routine inquiries concerning the Fund; assisting in the establishment and maintenance of accounts or sub-accounts in the Fund and in processing purchase and redemption transactions; making the Fund's investment plan and shareholder services available; and providing such other information and services to investors in shares of the Fund as the Distributor or the Trust, on behalf of the Fund, may reasonably request. The distribution services shall also include any advertising and marketing services provided by or arranged by the Distributor with respect to the Fund.

The Distributor is required to provide a written report, at least quarterly to the Board of Trustees of the Trust, specifying in reasonable detail the amounts expended pursuant to the Plan and the purposes for which such expenditures were made. Further, the Distributor will inform the Board of any Rule 12b-1 fees to be paid by the Distributor to Recipients.

The initial term of the Plan is one year and will continue in effect from year to year thereafter, provided such continuance is specifically approved at least annually by a majority of the Board of Trustees of the Trust and a majority of the Trustees who are not "interested persons" of the Trust and do not have a direct or indirect financial interest in the Rule 12b-1 Plan ("Rule 12b-1 Trustees") by votes cast in person at a meeting called for the purpose of voting on the Plan. The Plan may be terminated at any time by the Trust or the Fund by vote of a majority of the Rule 12b-1 Trustees or by vote of a majority of the outstanding voting shares of the Fund.

The Plan may not be amended to increase materially the amount of the Distributor's compensation to be paid by the Fund, unless such amendment is approved by the vote of a majority of the outstanding voting securities of the affected class of the Fund (as defined in the 1940 Act). All material amendments must be approved by a majority of the Board of Trustees of the Trust and a majority of the Rule 12b-1 Trustees by votes cast in person at a meeting called for the purpose of voting on a Plan. During the term of the Plan, the selection and nomination of non-interested Trustees of the Trust will be committed to the discretion of current non-interested Trustees. The Distributor will preserve copies of the Plan, any related agreements, and all reports, for a period of not less than six years from the date of such document and for at least the first two years in an easily accessible place.

Any agreement related to the Plan will be in writing and provide that: (a) it may be terminated by the Trust or the Fund at any time upon sixty days' written notice, without the payment of any penalty, by vote of a majority of the respective Rule 12b-1 Trustees, or by vote of a majority of the outstanding voting securities of the Trust or the Fund; (b) it will automatically terminate in the event of its assignment (as defined in the 1940 Act); and (c) it will continue in effect for a period of more than one year from the date of its execution or adoption only so long as such continuance is specifically approved at least annually by a majority of the Board and a majority of the Rule 12b-1 Trustees by votes cast in person at a meeting called for the purpose of voting on such agreement.

PORTFOLIO MANAGER

The following table lists the number and types of accounts managed by the portfolio manager in addition to those of the Funds and assets under management in those accounts as of April 30, 2021.

Total Other Accounts Managed

Portfolio Manager	Registered Investment Company Accounts	Assets Managed	Pooled Investment Vehicle Accounts	Assets Managed	Other Accounts	Assets Managed
Venkatesh Reddy	0	N/A	0	N/A	8	\$20.2 million
Marcus Moore*	0	N/A	0	N/A	8	\$3.1 million**

*Effective July 1, 2021, Marcus Moore has been added as a portfolio manager of the Funds

** As of July 1, 2021.

Other Accounts Managed Subject to Performance-Based Fees

Portfolio Manager	Registered Investment Company Accounts	Assets Managed (\$ millions)	Pooled Investment Vehicle Accounts	Assets Managed (\$ millions)	Other Accounts	Assets Managed (\$ millions)
Venkatesh Reddy	0	N/A	0	N/A	0	N/A
Marcus Moore	0	N/A	0	N/A	0	N/A

Conflicts of Interest.

As indicated in the table above, the portfolio managers employed by the Adviser may manage numerous accounts for multiple clients. These accounts may include registered investment companies, other types of pooled accounts (e.g., collective investment funds), and separate accounts (i.e., accounts managed on behalf of individuals or public or private institutions). The portfolio managers make investment decisions for each account based on the investment objectives and policies and other relevant investment considerations applicable to that portfolio.

When a portfolio manager has responsibility for managing more than one account, potential conflicts of interest may arise. Those conflicts could include preferential treatment of one account over others in terms of allocation of resources or of investment opportunities. For instance, the Adviser may receive fees from certain accounts that are higher than the fee it receives from the Funds, or it may receive a performance-based fee on certain accounts. In those instances, a portfolio manager may have an incentive to favor the higher and/or performance-based fee accounts over the Funds. The Adviser has adopted policies and procedures designed to address these potential material conflicts. For instance, portfolio managers employed by the Adviser are normally responsible for all accounts within a certain investment discipline, and do not, absent special circumstances, differentiate among the various accounts when allocating resources. Additionally, the Adviser utilizes a system for allocating investment opportunities among portfolios that is designed to provide a fair and equitable allocation.

Mr. Reddy and Mr. Moore receive a salary and may be eligible for a performance-based bonus. Mr. Reddy may receive a share of the profits, if any.

Ownership.

The following table shows the dollar range of equity securities beneficially owned by the portfolio managers in the Funds as of April 30, 2021.

Name of Portfolio Manager	Dollar Range of Equity Securities in the Funds
Venkatesh Reddy	\$500,000-\$1,000,000
Marcus Moore	\$10,001-\$50,000

ALLOCATION OF PORTFOLIO BROKERAGE

Specific decisions to purchase or sell securities for the Funds are made by the portfolio managers, who are employees of the Adviser. The Adviser is authorized by the Trustees to allocate the orders placed on behalf of the Funds to brokers or dealers who may, but need not, provide research or statistical material or other services to the Funds or the Adviser for the Funds' use. Such allocation is to be in such amounts and proportions as the Adviser may determine.

In selecting a broker or dealer to execute each particular transaction, the Adviser will take the following into consideration:

- the best net price available;
- the reliability, integrity and financial condition of the broker or dealer;
- the size of and difficulty in executing the order; and
- the value of the expected contribution of the broker or dealer to the investment performance of the Funds on a continuing basis.

Brokers or dealers executing a portfolio transaction on behalf of the Fund may receive a commission in excess of the amount of commission another broker or dealer would have charged for executing the transaction if the Adviser determines in good faith that such commission is reasonable in relation to the value of brokerage, research and other services provided to the Funds. In allocating portfolio brokerage, the Adviser may select brokers or dealers who also provide brokerage, research and other services to other accounts over which the Adviser exercises investment discretion. Some of the services received as the result of Fund transactions may primarily benefit accounts other than the Funds, while services received as the result of portfolio transactions effected on behalf of those other accounts may primarily benefit the Funds. For the fiscal year ended April 30, 2019, Short Duration paid brokerage commissions of \$0. For the fiscal year ended April 30, 2020, Short Duration paid brokerage commissions of \$0. For the fiscal year ended April 30, 2021, Sustainable Credit paid brokerage commissions of \$0.

PORTFOLIO TURNOVER

Each Fund's portfolio turnover rate is calculated by dividing the lesser of purchases or sales of portfolio securities for the fiscal year by the monthly average of the value of the portfolio securities owned by the Funds during the fiscal year. The calculation excludes from both the numerator and the denominator securities with maturities at the time of acquisition of one year or less. High portfolio turnover involves correspondingly greater brokerage commissions and other transaction costs, which will be borne directly by the Funds. A 100% turnover rate would occur if all of each Fund's portfolio securities were replaced once within a one-year period.

For the fiscal year ended April 30, 2020, Short Duration portfolio turnover rate was 95%. For the fiscal year ended April 30, 2021, Short Duration portfolio turnover rate was 94%. For the fiscal year ended April 30, 2020, Sustainable Credit portfolio turnover rate was 62%. For the fiscal year ended April 30, 2021, Sustainable Credit portfolio turnover rate was 75%.

OTHER SERVICE PROVIDERS

Fund Administration, Fund Accounting and Transfer Agent Services

Gemini Fund Services, LLC, (“GFS”), which has its principal office at 80 Arkay Drive, Suite 110, Hauppauge, New York 11788, serves as administrator, fund accountant and transfer agent for the Funds pursuant to a Fund Services Agreement (the “Agreement”) with the Trust and subject to the oversight of the Board. GFS is primarily in the business of providing administrative, fund accounting and transfer agent services to retail and institutional mutual funds. GFS is an affiliate of the Distributor. GFS may also provide persons to serve as officers of the Funds. Such officers may be directors, officers or employees of GFS or its affiliates.

Effective February 1, 2019, NorthStar Financial Services Group, LLC, the parent company of GFS and its affiliated companies including Northern Lights Distributors, LLC and Northern Lights Compliance Services, LLC (“NLCS”) and Blu Giant, LLC (collectively, the “Gemini Companies”), sold its interest in the Gemini Companies to a third party private equity firm that contemporaneously acquired Ultimus Fund Solutions, LLC (an independent mutual fund administration firm) and its affiliates (collectively, the “Ultimus Companies”). As a result of these separate transactions, the Gemini Companies and the Ultimus Companies are now indirectly owned through a common parent entity, The Ultimus Group, LLC.

The Agreement became effective on June 22, 2011 and remained in effect for two years from the applicable effective date for the Funds, and will continue in effect for successive twelve-month periods provided that such continuance is specifically approved at least annually by a majority of the Board. The Agreement is terminable by the Board or GFS on 90 days’ written notice and may be assigned by either party, provided that the Trust may not assign this agreement without the prior written consent of GFS. The Agreement provides that GFS shall be without liability for any action reasonably taken or omitted pursuant to the Agreement.

Under the Agreement, GFS performs administrative services, including: (1) monitoring the performance of administrative and professional services rendered to the Trust by others service providers; (2) monitoring Fund holdings and operations for post-trade compliance with the Funds’ registration statement and applicable laws and rules; (3) preparing and coordinating the printing of semi-annual and annual financial statements; (4) preparing selected management reports for performance and compliance analyses; (5) preparing and disseminating materials for and attending and participating in meetings of the Board; (6) determining income and capital gains available for distribution and calculating distributions required to meet regulatory, income, and excise tax requirements; (7) reviewing the Trust's federal, state, and local tax returns as prepared and signed by the Trust's independent public accountants; (8) preparing and maintaining the Trust's operating expense budget to determine proper expense accruals to be charged to each Funds to calculate its daily NAV; (9) assisting in and monitoring the preparation, filing, printing and where applicable, dissemination to shareholders of amendments to the Trust’s Registration Statement on Form N-1A, periodic reports to the Trustees, shareholders and the SEC, notices pursuant to Rule 24f-2, proxy materials and reports to the SEC on Forms N-CEN, N-CSR, N-PORT and N-PX; (10) coordinating the Trust's audits and examinations by assisting each Fund’s independent public accountants; (11) determining, in consultation with others, the jurisdictions in which shares of the Trust shall be registered or qualified for sale and facilitating such registration or qualification; (12) monitoring sales of shares and ensure that the shares are properly and duly registered with the SEC; (13) monitoring the calculation of performance data for the Funds; (14) preparing, or cause to be prepared, expense and financial reports; (15) preparing authorizations for the payment of Trust expenses and pay, from Trust assets, all bills of the Trust; (16) providing information typically supplied in the investment company industry to companies that track or report price, performance or other information with respect to investment companies; (17) upon request, assisting each Fund in the evaluation and selection of other service providers, such as independent public accountants, printers, EDGAR providers and proxy solicitors (such parties may be affiliates of GFS) and (18) performing other services, recordkeeping and assistance relating to the affairs of the Trust as the Trust may, from time to time, reasonably request.

GFS also provides the Funds with accounting services, including: (i) daily computation of net asset value; (ii) maintenance of security ledgers and books and records as required by the 1940 Act; (iii) production of a Fund’s listing of portfolio securities and general ledger reports; (iv) reconciliation of accounting records; (v) calculation of yield and total return for the Funds; (vi) maintenance of certain books and records described in Rule 31a-1 under the 1940 Act, and reconciliation of account information and balances among the Funds’ custodian and Adviser; and (vii) monitoring and evaluation of daily income and expense accruals, and sales and redemptions of shares of the Funds. For the administrative and fund accounting fees rendered to

the Funds by GFS, the Funds pay GFS the greater of an annual minimum fee or an asset-based fee, which scales downward based upon net assets. The Funds also pay GFS for any out-of-pocket expenses.

For the fiscal period ended April 30, 2019, Short Duration paid \$311,859 for administrative services and fund accounting fees. For the fiscal period ended April 30, 2020, Short Duration paid \$346,140 for administrative services and fund accounting fees. For the fiscal period ended April 30, 2021, Short Duration paid \$297,204 for administrative services and fund accounting fees.

For the fiscal period ended April 30, 2020, Sustainable Credit paid \$7,474 for administrative services and fund accounting fees. For the fiscal period ended April 30, 2021, Sustainable Credit paid \$36,192 for administrative services and fund accounting fees.

GFS also acts as transfer, dividend disbursing, and shareholder servicing agent for the Funds pursuant to the Agreement. Under the Agreement, GFS is responsible for administering and performing transfer agent functions, dividend distribution, shareholder administration, and maintaining necessary records in accordance with applicable rules and regulations. For such services rendered to the Funds under the Agreement, the Funds pay GFS the greater of an annual minimum fee or an asset based fee, which scales downward based upon net assets. The Funds also pay the Transfer Agent for any out-of-pocket expenses.

For the fiscal year ended April 30, 2019, Short Duration paid \$74,643 for transfer agency fees. For the fiscal year ended April 30, 2020, Short Duration paid \$79,403 for transfer agency fees. For the fiscal year ended April 30, 2021, Short Duration paid \$56,000 for transfer agency fees.

For the fiscal year ended April 30, 2020, the Sustainable Credit paid \$15,995 for transfer agency fees. For the fiscal year ended April 30, 2021, the Sustainable Credit paid \$19,880 for transfer agency fees.

Custodian

U.S. Bank (the "Custodian"), 800 Nicollet Mall, Minneapolis, MN 55402, serves as the custodian of the Funds' assets pursuant to a Custody Agreement by and between the Custodian and the Trust on behalf of the Funds. The Custodian's responsibilities include safeguarding and controlling the Funds' cash and securities, handling the receipt and delivery of securities, and collecting interest and dividends on the Funds' investments. Pursuant to the Custody Agreement, the Custodian also maintains original entry documents and books of record and general ledgers; posts cash receipts and disbursements; and records purchases and sales based upon communications from the Adviser. The Funds may employ foreign sub-custodians that are approved by the Board to hold foreign assets.

Compliance Services

Northern Lights Compliance Services, LLC ("NLCS"), 4221 North 203rd Street, Suite 100, Elkhorn, Nebraska 68022-3474, an affiliate of GFS and the Distributor, provides a Chief Compliance Officer to the Trust as well as related compliance services pursuant to a consulting agreement between NLCS and the Trust. NLCS's compliance services consist primarily of reviewing and assessing the policies and procedures of the Trust and its service providers pertaining to compliance with applicable federal securities laws, including Rule 38a-1 under the 1940 Act. For the compliance services rendered to the Funds, the Funds pay NLCS an annual fixed fee and an asset based fee, which scales downward based on each Fund's assets. The Funds also pay NLCS for any out-of-pocket expenses.

For the fiscal year ended April 30, 2019, Short Duration paid \$26,423 for compliance service fees. For the fiscal year ended April 30, 2020, Short Duration paid \$30,063 for compliance service fees. For the fiscal year ended April 30, 2021, Short Duration paid \$17,664 for compliance service fees.

For the fiscal year ended April 30, 2020, Sustainable Credit paid \$6,813 for compliance service fees. For the fiscal year ended April 30, 2021, Sustainable Credit paid \$10,076 for compliance service fees.

DESCRIPTION OF SHARES

Each share of beneficial interest of the Trust has one vote in the election of Trustees. Cumulative voting is not authorized for the Trust. This means that the holders of more than 50% of the shares voting for the election of Trustees can elect 100% of the Trustees if they choose to do so, and, in that event, the holders of the remaining shares will be unable to elect any Trustees.

Shareholders of the Trust and any other future series of the Trust will vote in the aggregate and not by series except as otherwise required by law or when the Board determines that the matter to be voted upon affects only the interest of the shareholders of a particular series. Matters such as ratification of the independent public accountants and election of Trustees are not subject to separate voting requirements and may be acted upon by shareholders of the Trust voting without regard to series.

The Trust is authorized to issue an unlimited number of shares of beneficial interest. Each share has equal dividend, distribution and liquidation rights. There are no conversion or preemptive rights applicable to any shares of the Funds. All shares issued are fully paid and non-assessable.

ANTI-MONEY LAUNDERING PROGRAM

The Trust has established an Anti-Money Laundering Compliance Program (the "Program") as required by Section 352 the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act of 2001 ("USA PATRIOT Act"). To ensure compliance with this law, the Trust's Program is written and has been approved by the Funds' Board of Trustees. The program provides for the development of policies, procedures and internal controls reasonably designed to prevent money laundering, the designation of an anti-money laundering compliance officers who is responsible for implementing and monitoring the Program, ongoing training for appropriate persons and an independent audit function to determine the effectiveness of the Program.

Procedures to implement the Program include, but are not limited to, determining that the Funds' Distributor, and Transfer Agent have established reasonable anti-money laundering procedures, have reported suspicious and/or fraudulent activity and have completed thorough reviews of all new opening account applications. The Trust will not transact business with any person or entity whose identity cannot be adequately verified under the provisions of the USA PATRIOT Act.

As a result of the Program, the Trust may be required to "freeze" the account of a shareholder if the shareholder appears to be involved in suspicious activity or if certain account information matches information on government lists of known terrorists or other suspicious persons, or the Trust may be required to transfer the account or proceeds of the account to a governmental agency.

PURCHASE, REDEMPTION AND PRICING OF SHARES

Calculation of Share Price

As indicated in the Prospectus under the heading "How Shares are Priced," the NAV of the Funds' shares, by class, is determined by dividing the total value of the Funds' portfolio investments and other assets, less any liabilities, by the total number of shares outstanding of the Funds, by class.

Generally, the Funds' domestic securities (including underlying ETFs which hold portfolio securities primarily listed on foreign (non-U.S.) exchanges) are valued each day at the last quoted sales price on each security's primary exchange. Securities traded or dealt in upon one or more securities exchanges for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid and ask prices on such exchange. Securities primarily traded in the National Association of Securities Dealers' Automated Quotation System ("NASDAQ") National Market System for which market

quotations are readily available shall be valued using the NASDAQ Official Closing Price. If market quotations are not readily available, securities will be valued at their fair market value as determined in good faith by the Funds' fair value committee in accordance with procedures approved by the Board and as further described below. Securities that are not traded or dealt in any securities exchange (whether domestic or foreign) and for which over-the-counter market quotations are readily available generally shall be valued at the last sale price or, in the absence of a sale, at the mean between the current bid and ask price on such over-the-counter market.

Certain securities or investments for which daily market quotes are not readily available may be valued, pursuant to guidelines established by the Board, with reference to other securities or indices. Debt securities not traded on an exchange may be valued at prices supplied by a pricing agent(s) based on broker or dealer supplied valuations or matrix pricing, a method of valuing securities by reference to the value of other securities with similar characteristics, such as rating, interest rate and maturity. Short-term investments having a maturity of 60 days or less may be generally valued at amortized cost when it approximated fair value.

Exchange traded options are valued at the last quoted sales price or, in the absence of a sale, at the mean between the current bid and ask prices on the exchange on which such options are traded. Futures and options on futures are valued at the settlement price determined by the exchange. Other securities for which market quotes are not readily available are valued at fair value as determined in good faith by the Board or persons acting at their direction. Swap agreements and other derivatives are generally valued daily based upon quotations from market makers or by a pricing service in accordance with the valuation procedures approved by the Board.

Under certain circumstances, the Funds may use an independent pricing service to calculate the fair market value of foreign equity securities on a daily basis by applying valuation factors to the last sale price or the mean price as noted above. The fair market values supplied by the independent pricing service will generally reflect market trading that occurs after the close of the applicable foreign markets of comparable securities or the value of other instruments that have a strong correlation to the fair-valued securities. The independent pricing service will also take into account the current relevant currency exchange rate. A security that is fair valued may be valued at a price higher or lower than actual market quotations or the value determined by other funds using their own fair valuation procedures. Because foreign securities may trade on days when Fund shares are not priced, the value of securities held by the Funds can change on days when Fund shares cannot be redeemed or purchased. In the event that a foreign security's market quotations are not readily available or are deemed unreliable (for reasons other than because the foreign exchange on which it trades closed before the Funds' calculation of NAV), the security will be valued at its fair market value as determined in good faith by the Funds' fair value committee in accordance with procedures approved by the Board as discussed below. Without fair valuation, it is possible that short-term traders could take advantage of the arbitrage opportunity and dilute the NAV of long-term investors. Fair valuation of the Funds' portfolio securities can serve to reduce arbitrage opportunities available to short-term traders, but there is no assurance that it will prevent dilution of the Funds' NAV by short-term traders. In addition, because the Funds may invest in underlying ETFs which hold portfolio securities primarily listed on foreign (non-U.S.) exchanges, and these exchanges may trade on weekends or other days when the underlying ETFs do not price their shares, the value of these portfolio securities may change on days when you may not be able to buy or sell Fund shares. When market quotations are insufficient or not readily available, the Funds may value securities at fair value or estimate their value as determined in good faith by the Board or its designees, pursuant to procedures approved by the Board. Fair valuation may also be used by the Board if extraordinary events occur after the close of the relevant market but prior to the NYSE Close.

Investments initially valued in currencies other than the U.S. dollar are converted to U.S. dollars using exchange rates obtained from pricing services. As a result, the NAV of the Funds' shares may be affected by changes in the value of currencies in relation to the U.S. dollar. The value of securities traded in markets outside the United States or denominated in currencies other than the U.S. dollar may be affected significantly on a day that the New York Stock Exchange is closed and an investor is not able to purchase, redeem or exchange shares.

Each Fund shares are valued at the close of regular trading on the New York Stock Exchange (normally 4:00 p.m., Eastern time) (the "NYSE Close") on each day that the New York Stock Exchange is open. For purposes of calculating the NAV, the Funds normally use pricing data for domestic equity securities received shortly after the NYSE Close and does not normally take into account trading, clearances or settlements that take place after the NYSE Close. Domestic fixed income and foreign securities are normally priced using data reflecting the earlier closing of the principal markets for those securities. Information

that becomes known to the Funds or its agents after the NAV has been calculated on a particular day will not generally be used to retroactively adjust the price of the security or the NAV determined earlier that day.

The Funds may hold securities, such as private placements, interests in commodity pools, other non-traded securities or temporarily illiquid securities, for which market quotations are not readily available or are determined to be unreliable. These securities will be valued at their fair market value as determined using the "fair value" procedures approved by the Board. The Board has delegated execution of these procedures to a fair value committee composed of one or more representatives from each of the (i) Trust, (ii) administrator, and (iii) Adviser. The committee may also enlist third party consultants such as an audit firm or financial officer of a security issuer on an as-needed basis to assist in determining a security-specific fair value. The Board reviews and ratifies the execution of this process and the resultant fair value prices at least quarterly to assure the process produces reliable results.

Fair Value Committee and Valuation Process. The fair value committee is composed of one or more representatives from each of the (i) Trust, (ii) administrator, and (iii) Adviser. The applicable investments are valued collectively via inputs from each of these groups. For example, fair value determinations are required for the following securities: (i) securities for which market quotations are insufficient or not readily available on a particular business day (including securities for which there is a short and temporary lapse in the provision of a price by the regular pricing source), (ii) securities for which, in the judgment of the adviser, the prices or values available do not represent the fair value of the instrument. Factors which may cause the adviser to make such a judgment include, but are not limited to, the following: only a bid price or an asked price is available; the spread between bid and asked prices is substantial; the frequency of sales; the thinness of the market; the size of reported trades; and actions of the securities markets, such as the suspension or limitation of trading; (iii) securities determined to be illiquid; (iv) securities with respect to which an event that will affect the value thereof has occurred (a "significant event") since the closing prices were established on the principal exchange on which they are traded, but prior to the Funds' calculation of its net asset value. Specifically, interests in commodity pools or managed futures pools are valued on a daily basis by reference to the closing market prices of each futures contract or other asset held by a pool, as adjusted for pool expenses. Restricted or illiquid securities, such as private placements or non-traded securities are valued via inputs from the adviser valuation based upon the current bid for the security from two or more independent dealers or other parties reasonably familiar with the facts and circumstances of the security (who should take into consideration all relevant factors as may be appropriate under the circumstances). If the adviser is unable to obtain a current bid from such independent dealers or other independent parties, the fair value committee shall determine the fair value of such security using the following factors: (i) the type of security; (ii) the cost at date of purchase; (iii) the size and nature of the Funds' holdings; (iv) the discount from market value of unrestricted securities of the same class at the time of purchase and subsequent thereto; (v) information as to any transactions or offers with respect to the security; (vi) the nature and duration of restrictions on disposition of the security and the existence of any registration rights; (vii) how the yield of the security compares to similar securities of companies of similar or equal creditworthiness; (viii) the level of recent trades of similar or comparable securities; (ix) the liquidity characteristics of the security; (x) current market conditions; and (xi) the market value of any securities into which the security is convertible or exchangeable.

Standards for Fair Value Determinations. As a general principle, the fair value of a security is the amount that a Fund might reasonably expect to realize upon its current sale. The Trust has adopted Financial Accounting Standards Board Statement of Financial Accounting Standards Codification Topic 820, Fair Value Measurements and Disclosures ("ASC 820"). In accordance with ASC 820, fair value is defined as the price that the Funds would receive upon selling an investment in a timely transaction to an independent buyer in the principal or most advantageous market of the investment. ASC 820 establishes a three-tier hierarchy to maximize the use of observable market data and minimize the use of unobservable inputs and to establish classification of fair value measurements for disclosure purposes. Inputs refer broadly to the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk, for example, the risk inherent in a particular valuation technique used to measure fair value including such a pricing model and/or the risk inherent in the inputs to the valuation technique. Inputs may be observable or unobservable. Observable inputs are inputs that reflect the assumptions market participants would use in pricing the asset or liability developed based on market data obtained from sources independent of the reporting entity. Unobservable inputs are inputs that reflect the reporting entity's own assumptions about the assumptions market participants would use in pricing the asset or liability, developed based on the best information available under the circumstances.

Various inputs are used in determining the value of each Fund's investments relating to ASC 820. These inputs are summarized in the three broad levels listed below.

Level 1 – quoted prices in active markets for identical securities.

Level 2 – other significant observable inputs (including quoted prices for similar securities, interest rates, prepayment speeds, credit risk, etc.)

Level 3 – significant unobservable inputs (including a Fund's own assumptions in determining the fair value of investments).

The fair value committee takes into account the relevant factors and surrounding circumstances, which may include: (i) the nature and pricing history (if any) of the security; (ii) whether any dealer quotations for the security are available; (iii) possible valuation methodologies that could be used to determine the fair value of the security; (iv) the recommendation of a portfolio manager of the Funds with respect to the valuation of the security; (v) whether the same or similar securities are held by other funds managed by the Adviser or other funds and the method used to price the security in those funds; (vi) the extent to which the fair value to be determined for the security will result from the use of data or formulae produced by independent third parties and (vii) the liquidity or illiquidity of the market for the security.

Board of Trustees Determination. The Board of Trustees meets at least quarterly to consider the valuations provided by the fair value committee and to ratify the valuations made for the applicable securities. The Board of Trustees considers the reports provided by the fair value committee, including follow up studies of subsequent market-provided prices when available, in reviewing and determining in good faith the fair value of the applicable portfolio securities.

The Trust expects that the NYSE will be closed on the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day.

Purchase of Shares

Orders for shares received by the Funds in good order prior to the close of business on the NYSE on each day during such periods that the NYSE is open for trading are priced at NAV per share computed as of the close of the regular session of trading on the NYSE. Orders received in good order after the close of the NYSE, or on a day it is not open for trading, are priced at the close of such NYSE on the next day on which it is open for trading at the next determined NAV or offering price per share.

Notice to Texas Shareholders

Under section 72.1021(a) of the Texas Property Code, initial investors in a Fund who are Texas residents may designate a representative to receive notices of abandoned property in connection with Fund shares. Texas shareholders who wish to appoint a representative should notify the Transfer Agent by writing to the address below to obtain a form for providing written notice to the Trust:

Zeo Funds
c/o Gemini Fund Services, LLC
c/o Gemini Fund Services, LLC
P.O. Box 541150
Omaha, Nebraska 68154

or overnight to

4221 North 203rd Street, Suite 100
Elkhorn, Nebraska 68022-3474

Redemption of Shares

The Funds will redeem all or any portion of a shareholder's shares in the Funds when requested in accordance with the procedures set forth in the "How to Redeem Shares" section of the Prospectus. Under the 1940 Act, a shareholder's right to redeem shares and to receive payment therefore may be suspended at times:

- (a) when the NYSE is closed, other than customary weekend and holiday closings;
- (b) when trading on that exchange is restricted for any reason;
- (c) when an emergency exists as a result of which disposal by the Funds of securities owned by it is not reasonably practicable or it is not reasonably practicable for the Funds to fairly determine the value of its net assets, provided that applicable rules and regulations of the SEC (or any succeeding governmental authority) will govern as to whether the conditions prescribed in (b) or (c) exist; or
- (d) when the SEC by order permits a suspension of the right to redemption or a postponement of the date of payment on redemption.

In case of suspension of the right of redemption, payment of a redemption request will be made based on the NAV next determined after the termination of the suspension.

The Funds may purchase shares of Underlying Funds which charge a redemption fee to shareholders (such as the Funds) that redeem shares of the Underlying Fund within a certain period of time (such as one year). The fee is payable to the Underlying Fund. Accordingly, if the Funds were to invest in an Underlying Fund and incur a redemption fee as a result of redeeming shares in such Underlying Fund, the Funds would bear such redemption fee. The Funds will not, however, invest in shares of an Underlying Fund that is sold with a contingent deferred sales load.

Supporting documents in addition to those listed under "How To Redeem Shares" in the Prospectus will be required from executors, administrators, Trustees, or if redemption is requested by someone other than the shareholder of record. Such documents include, but are not restricted to, stock powers, Trust instruments, certificates of death, appointments as executor, certificates of corporate authority and waiver of tax required in some states when settling estates.

Waivers of Redemption Fees: The Funds have elected not to impose the redemption fee for:

- Redemptions and exchanges of Fund shares acquired through the reinvestment of dividends and distributions;
- Certain types of redemptions and exchanges of Fund shares owned through participant-directed retirement plans;
- Redemptions or exchanged in discretionary asset allocation, fee based or wrap programs ("wrap programs") that are initiated by the sponsor/financial advisor as part of a periodic rebalancing;
- Redemptions or exchanged in a fee based or wrap program that are made as a result of a full withdrawal from the wrap program or as part of a systematic withdrawal plan including the Funds' systematic withdrawal plan;
- Involuntary redemptions, such as those resulting from a shareholder's failure to maintain a minimum investment in the Funds, or to pay shareholder fees; or
- Other types of redemption as the Adviser or the Trust may determine in special situations and approved by the Funds' or the Adviser's Chief Compliance Officer.

TAX STATUS

The following discussion is general in nature and should not be regarded as an exhaustive presentation of all possible tax ramifications. All shareholders should consult a qualified tax advisor regarding their investment in the Funds.

The Funds intend to qualify as a regulated investment company under Subchapter M of the Internal Revenue Code of 1986, as amended (the "Code"), which requires compliance with certain requirements concerning the sources of its income, diversification of its assets, and the amount and timing of its distributions to shareholders. Such qualification does not involve supervision of management or investment practices or policies by any government agency or bureau. By so qualifying, the Funds should not be subject to federal income or excise tax on its investment company taxable income or net capital gain, which are distributed to shareholders in accordance with the applicable timing requirements. Investment company taxable income and net capital gain of the Funds will be computed in accordance with Section 852 of the Code.

Investment company taxable income generally includes dividends, interest and other income, less certain allowable expenses, and it also includes any excess of net short-term capital gains over net long-term capital losses. Net capital gain (that is, any excess of net long-term capital gains over net short-term capital losses) for a fiscal year is computed by taking into account any capital loss carryforward of the Funds. Capital losses incurred in taxable years beginning after December 22, 2010

may be carried forward indefinitely and retain the character of the original loss. Under previously enacted laws, capital losses could be carried forward to offset any capital gains for eight years, and carried forward as short-term capital losses, irrespective of the character of the original loss. Capital loss carry forwards are available to offset future realized capital gains. To the extent that these carry forwards are used to offset future capital gains it is probable that the amount offset will not be distributed to shareholders.

The Funds intend to distribute all of its investment company taxable income and net capital gain in accordance with the timing requirements imposed by the Code and therefore should not be required to pay any federal income or excise taxes. Distributions of investment company taxable income and net capital gain will be made at least annually, no later than December 31 of each year. Both types of distributions will be in shares of the Funds unless a shareholder elects to receive cash.

Short Duration net realized capital gains from securities transactions will be distributed only after reducing the gains by the amount of any available capital loss carry forwards. As of April 30, 2021, Short Duration had \$1,307,714 in capital loss carry forwards available to offset any future gains.

Sustainable Credit net realized capital gains from securities transactions will be distributed only after reducing the gains by the amount of any available capital loss carry forwards. As of April 30, 2021, Sustainable Credit had \$672 in capital loss carry forwards available to offset any future gains.

To be treated as a regulated investment company under Subchapter M of the Code, the Funds must also (a) derive at least 90% of its gross income from dividends, interest, payments with respect to securities loans, net income from certain publicly traded partnerships and gains from the sale or other disposition of securities or foreign currencies, or other income (including, but not limited to, gains from options, futures or forward contracts) derived with respect to the business of investing in such securities or currencies, and (b) diversify its holding so that, at the end of each fiscal quarter, (i) at least 50% of the market value of the Funds' assets is represented by cash, U.S. government securities and securities of other regulated investment companies, and other securities (for purposes of this calculation, generally limited in respect of any one issuer, to an amount not greater than 5% of the market value of the Funds' assets and 10% of the outstanding voting securities of such issuer) and (ii) not more than 25% of the value of its assets is invested in the securities of (other than U.S. government securities or the securities of other regulated investment companies) any one issuer, two or more issuers which the Funds control and which are determined to be engaged in the same or similar trades or businesses, or the securities of certain publicly traded partnerships.

If the Funds fail to qualify as a regulated investment company under Subchapter M in any fiscal year, it will be treated as a corporation for federal income tax purposes. As such, the Funds would be required to pay income taxes on its income at the rates generally applicable to corporations, and distributions to shareholders, would be treated as taxable dividends to the extent of current or accumulated earnings and profits of the Funds.

The Funds are subject to a 4% nondeductible excise tax on certain undistributed amounts of ordinary income and capital gain under a prescribed formula contained in Section 4982 of the Code. The formula requires payment to shareholders during a calendar year of distributions representing at least 98% of the Funds' ordinary income for the calendar year and at least 98.2% of its capital gain net income (i.e., the excess of its capital gains over capital losses) realized during the one-year period ending October 31 during such year plus 100% of any income that was neither distributed nor taxed to the Funds during the preceding calendar year. Under ordinary circumstances, the Funds expect to time its distributions so as to avoid liability for this tax.

The following discussion of tax consequences is for the general information of shareholders that are subject to tax. Shareholders that are IRAs or other qualified retirement plans generally are exempt from income taxation under the Code, but should consult their own tax advisors about the tax consequences of investing in the Funds, including potential taxation of unrelated business taxable income.

Distributions of investment company taxable income generally are taxable to shareholders as ordinary income or "qualified dividend income" (as described below). In most cases the Funds will hold shares in Underlying Funds for less than 12 months, such that its sales of such shares from time to time will not qualify as long-term capital gains for those investors who hold shares of the Funds in taxable accounts.

Dividends paid by the Funds to an individual shareholder, to the extent such dividends are attributable to "qualified dividend income" received by the Funds from U.S. corporations (and certain foreign corporations), may qualify for taxation at the long-term capital gains rate available to individuals on qualified dividend income. Furthermore, dividends paid by the Funds to a

corporate shareholder, to the extent such dividends are attributable to dividends received by the Funds from U.S. corporations, may qualify for a dividends received deduction.

Distributions of net capital gain (“capital gain dividends”) generally are taxable to shareholders as long-term capital gain, regardless of the length of time the shares of the Funds have been held by such shareholders.

An additional 3.8% Medicare tax will be imposed on certain net investment income (including ordinary dividends, qualified dividend income distributions and capital gain dividends, as well as gains from redemption of Fund shares) of U.S. individuals, estates and trusts, to the extent that the shareholder’s “modified adjusted gross income” (in the case of an individual) or “adjusted gross income” (in the case of an estate or trust) exceeds certain threshold amounts. U.S. shareholders are urged to consult their own tax advisers regarding the implications of the additional Medicare tax resulting from an investment in the Funds.

Redemption of Fund shares by a shareholder will result in the recognition of taxable gain or loss in an amount equal to the difference between the amount realized and the shareholder’s tax basis in his or her Fund shares. Such gain or loss is treated as a capital gain or loss if the shares are held as capital assets. However, any loss realized upon the redemption of shares within six months from the date of their purchase will be treated as a long-term capital loss to the extent of any amounts treated as capital gain dividends during such six-month period. All or a portion of any loss realized upon the redemption of shares may be disallowed to the extent shares are purchased (including shares acquired by means of reinvested dividends) within 30 days before or after such redemption.

Distributions of investment company taxable income and net capital gain will be taxable as described above, whether received in additional cash or shares. Shareholders electing to reinvest distributions in the form of additional shares will have a cost basis for federal income tax purposes in each share so received equal to the net asset value of a share on the reinvestment date.

All distributions of investment company taxable income and net capital gain, whether received in shares or in cash, must be reported by each taxable shareholder on his or her federal income tax return. Dividends or distributions declared in October, November or December as of a record date in such a month, if any, will be deemed to have been received by shareholders on December 31, if paid during January of the following year. Redemptions of shares may result in tax consequences (gain or loss) to the shareholder and are also subject to these reporting requirements.

Under the Code, the Funds will be required to report to the Internal Revenue Service all distributions of taxable income and capital gains as well as gross proceeds from the redemption or exchange of Fund shares, except in the case of certain exempt shareholders. Under the backup withholding provisions of Section 3406 of the Code, distributions of investment company taxable income and net capital gain and proceeds from the redemption or exchange of the shares of a regulated investment company may be subject to withholding of federal income tax in the case of non-exempt shareholders who fail to furnish the investment company with their taxpayer identification numbers and with required certifications regarding their status under the federal income tax law, or if the Funds are notified by the IRS or a broker that withholding is required due to an incorrect TIN or a previous failure to report taxable interest or dividends. If the withholding provisions are applicable, any such distributions and proceeds, whether taken in cash or reinvested in additional shares, will be reduced by the amounts required to be withheld.

Other Reporting and Withholding Requirements

Payments to a shareholder that is either a foreign financial institution (“FFI”) or a non-financial foreign entity (“NFFE”) within the meaning of the Foreign Account Tax Compliance Act (“FATCA”) may be subject to a generally nonrefundable 30% withholding tax on: (a) income dividends paid by the Funds after June 30, 2014 and (b) certain capital gain distributions and the proceeds arising from the sale of Fund shares paid by the Funds after December 31, 2016. FATCA withholding tax generally can be avoided: (a) by an FFI, subject to any applicable intergovernmental agreement or other exemption, if it enters into a valid agreement with the IRS to, among other requirements, report required information about certain direct and indirect ownership of foreign financial accounts held by U.S. persons with the FFI and (b) by an NFFE, if it: (i) certifies that it has no substantial U.S. persons as owners or (ii) if it does have such owners, reports information relating to them. The Funds may disclose the information that it receives from its shareholders to the IRS, non-U.S. taxing authorities or other parties as necessary to comply with FATCA. Withholding also may be required if a foreign entity that is a shareholder of a Fund fails to provide the Funds with appropriate certifications or other documentation concerning its status under FATCA.

Options, Futures, Forward Contracts and Swap Agreements

To the extent such investments are permissible for the Funds, the Funds' transactions in options, futures contracts, hedging transactions, forward contracts, straddles and foreign currencies will be subject to special tax rules (including mark-to-market, constructive sale, straddle, wash sale and short sale rules), the effect of which may be to accelerate income to the Funds, defer losses to the Funds, cause adjustments in the holding periods of the Funds' securities, convert long-term capital gains into short-term capital gains and convert short-term capital losses into long-term capital losses. These rules could therefore affect the amount, timing and character of distributions to shareholders.

To the extent such investments are permissible, certain of the Funds' hedging activities (including its transactions, if any, in foreign currencies or foreign currency-denominated instruments) are likely to produce a difference between its book income and its taxable income. If the Funds' book income exceeds its taxable income, the distribution (if any) of such excess book income will be treated as (i) a dividend to the extent of the Funds' remaining earnings and profits (including earnings and profits arising from tax-exempt income), (ii) thereafter, as a return of capital to the extent of the recipient's basis in the shares, and (iii) thereafter, as gain from the sale or exchange of a capital asset. If the Funds' book income is less than taxable income, the Funds could be required to make distributions exceeding book income to qualify as a regulated investment company that is accorded special tax treatment.

Passive Foreign Investment Companies

Investment by the Funds in certain "passive foreign investment companies" ("PFICs") could subject the Funds to a U.S. federal income tax (including interest charges) on distributions received from the company or on proceeds received from the disposition of shares in the company, which tax cannot be eliminated by making distributions to Fund shareholders. However, the Funds may elect to treat a PFIC as a "qualified electing fund" ("QEF election"), in which case the Funds will be required to include its share of the company's income and net capital gains annually, regardless of whether it receives any distribution from the company.

The Funds also may make an election to mark the gains (and to a limited extent losses) in such holdings "to the market" as though it had sold and repurchased its holdings in those PFICs on the last day of a Fund's taxable year. Such gains and losses are treated as ordinary income and loss. The QEF and mark-to-market elections may accelerate the recognition of income (without the receipt of cash) and increase the amount required to be distributed for the Funds to avoid taxation. Making either of these elections therefore may require the Funds to liquidate other investments (including when it is not advantageous to do so) to meet its distribution requirement, which also may accelerate the recognition of gain and affect a Fund's total return.

Foreign Currency Transactions

A Fund's transactions in foreign currencies, foreign currency-denominated debt securities and certain foreign currency options, futures contracts and forward contracts (and similar instruments) may give rise to ordinary income or loss to the extent such income or loss results from fluctuations in the value of the foreign currency concerned.

Foreign Taxation

Income received by the Funds from sources within foreign countries may be subject to withholding and other taxes imposed by such countries. Tax treaties and conventions between certain countries and the U.S. may reduce or eliminate such taxes. If more than 50% of the value of the Funds' total assets at the close of its taxable year consists of securities of foreign corporations, the Funds may be able to elect to "pass through" to its shareholders the amount of eligible foreign income and similar taxes paid by the Funds. If this election is made, a shareholder generally subject to tax will be required to include in gross income (in addition to taxable dividends actually received) his or her pro rata share of the foreign taxes paid by the Funds, and may be entitled either to deduct (as an itemized deduction) his or her pro rata share of foreign taxes in computing his or her taxable income or to use it as a foreign tax credit against his or her U.S. federal income tax liability, subject to certain limitations. In particular, a shareholder must hold his or her shares (without protection from risk of loss) on the ex-dividend date and for at least 15 more days during the 30-day period surrounding the ex-dividend date to be eligible to claim a foreign tax credit with respect to the dividend. No deduction for foreign taxes may be claimed by a shareholder who does not itemize deductions. Each shareholder will be notified within 60 days after the close of the Funds' taxable year whether the foreign taxes paid by the Funds will "pass through" for that year.

Generally, a credit for foreign taxes is subject to the limitation that it may not exceed the shareholder's U.S. tax attributable to his or her total foreign source taxable income. For this purpose, if the pass-through election is made, the source of the Funds' income will flow through to shareholders of the Funds. With respect to the Funds, gains from the sale of securities generally will be treated as derived from U.S. sources and certain currency fluctuation gains, including fluctuation gains from foreign currency-denominated debt securities, receivables and payables generally will be treated as ordinary income derived from U.S. sources. The limitation on the foreign tax credit is applied separately to foreign source passive income, and to certain other types of income. A shareholder may be unable to claim a credit for the full amount of his or her proportionate share of the foreign taxes paid by the Funds. The foreign tax credit can be used to offset only 90% of the revised alternative minimum tax imposed on corporations and individuals and foreign taxes generally are not deductible in computing alternative minimum taxable income.

Original Issue Discount and Pay-In-Kind Securities

Current federal tax law requires the holder of a U.S. Treasury or other fixed income zero coupon security to accrue as income each year a portion of the discount at which the security was originally issued, even though the holder receives no interest payment in cash on the security during the year. In addition, other debt instruments, such as pay-in-kind securities, may give rise to income under the original issue discount rules, which income is required to be distributed and is taxable even though the Funds holding the security receives no interest payment in cash on the security during the year.

Some of the debt securities (with a fixed maturity date of more than one year from the date of issuance) that may be acquired by the Funds may be treated as debt securities that are issued originally at a discount. Generally, the amount of the original issue discount ("OID") is treated as interest income and is included in income over the term of the debt security, even though payment of that amount is not received until a later time, usually when the debt security matures. A portion of the OID includable in income with respect to certain high-yield corporate debt securities (including certain pay-in-kind securities) may be treated as a dividend for U.S. federal income tax purposes.

Some of the debt securities (with a fixed maturity date of more than one year from the date of issuance) that may be acquired by the Funds in the secondary market may be treated as having market discount. Generally, any gain recognized on the disposition of, and any partial payment of principal on, a debt security having market discount is treated as ordinary income to the extent the gain, or principal payment, does not exceed the "accrued market discount" on such debt security. Market discount generally accrues in equal daily installments. The Funds may make one or more of the elections applicable to debt securities having market discount, which could affect the character and timing of recognition of income.

Some debt securities (with a fixed maturity date of one year or less from the date of issuance) that may be acquired by a Fund may be treated as having acquisition discount, or OID in the case of certain types of debt securities. Generally, the Funds will be required to include the acquisition discount, or OID, in income over the term of the debt security, even though payment of that amount is not received until a later time, usually when the debt security matures. The Funds may make one or more of the elections applicable to debt securities having acquisition discount, or OID, which could affect the character and timing of recognition of income.

If the Funds hold the foregoing kinds of securities, it may be required to pay out as an income distribution each year an amount that is greater than the total amount of cash interest the Funds actually received. Such distributions may be made from the cash assets of the Funds or by liquidation of portfolio securities, if necessary (including when it is not advantageous to do so). The Funds may realize gains or losses from such liquidations. In the event the Funds realize net capital gains from such transactions, its shareholders may receive a larger capital gain distribution, if any, than they would in the absence of such transactions.

Shareholders of the Funds may be subject to state and local taxes on distributions received from the Funds and on redemptions of the Funds' shares.

The foregoing discussion relates only to U.S. federal income tax law as applicable to U.S. persons (that is, U.S. citizens and residents, and domestic corporations, partnerships, trusts and estates). Shareholders who are not U.S. persons should consult their tax advisors regarding the U.S. and foreign tax consequences of an investment in the Funds.

A brief explanation of the form and character of the distribution accompany each distribution. In January of each year the Funds issue to each shareholder a statement of the federal income tax status of all distributions.

Shareholders should consult their tax advisors about the application of federal, state and local and foreign tax law in light of their particular situation.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Cohen & Company, Ltd., located at 1350 Euclid Avenue, Suite 800, Cleveland, OH 44115, serves as the Funds' independent registered public accounting firm providing services including (1) audit of annual financial statements, and (2) assistance and consultation in connection with SEC filings.

LEGAL COUNSEL

Thompson Hine LLP, 41 South High Street, Suite 1700, Columbus, Ohio 43215 serves as the Trust's legal counsel.

FINANCIAL STATEMENTS

The financial statements and report of the independent registered public accounting firm required to be included in this SAI are hereby incorporated by reference to the Annual Report for the Funds for the fiscal year ended April 30, 2021. You can obtain a copy of the Annual Report without charge by calling the Funds at 1-855-936-3863.

APPENDIX A
PROXY VOTING GUIDELINES FOR

Zeo Capital Advisors, LLC

PROXY VOTING

A. Applicability to the Firm

Currently, with the exception of money market mutual funds, the Firm's own 401(k) program and certain Client Accounts that may hold the Fund, the Firm only trades corporate debt and syndicated bank loans. Therefore, it is rare that the Firm will receive proxy solicitations for Client Accounts.

However, Employees should familiarize themselves with the Firm's Proxy Voting procedures in this Section VII in the event that the Firm receives any proxy solicitations for Client Accounts or holds other securities for clients that may require the Firm to vote proxies on behalf of Client Accounts.

B. Discretionary Accounts.

The Firm instructs each custodian for a Discretionary Account to deliver to the Firm all proxy solicitation materials that the custodian receives for that Discretionary Account. The Firm reviews the securities held in its Discretionary Accounts on a regular basis to confirm that the Firm receives copies of all proxy solicitation materials concerning such securities. The Firm marks each proxy solicitation with the date it is received by the Firm.

After carefully considering proxy solicitation materials and other available facts, the Firm votes all proxies on behalf of Discretionary Accounts, except when it abstains from voting as described below. The CCO makes all voting decisions on behalf of a Discretionary Account based solely on his determination of the best interests of that Discretionary Account. The Firm uses reasonable efforts to respond to each proxy solicitation by the deadline for such response.

The CCO is responsible for insuring that all proxy statements are received and that the Firm responds to them in a timely manner. Employees should forward any proxy materials that the Firm receives with respect to a Client Account immediately to the CCO.

1. Company Information. If the Firm is considering voting a proxy, it reviews all proxy solicitation materials it receives concerning securities held in a Discretionary Account. The Firm evaluates all such information and may seek additional information from the party soliciting the proxy and independent corroboration of such information when the Firm considers it appropriate and when it is reasonably available.

2. Proxy Voting Policies.

Generally, it is the Firm's policy to vote all proxies from a single issuer the same way for each Client Account, except that clients are permitted to place reasonable restrictions on the Firm's voting authority in the same manner that they may place such restrictions on the actual selection of securities. The Firm generally votes in favor of routine corporate housekeeping proposals such as the election of directors and selection of auditors absent conflicts of interest raised by an auditor's non-audit services. Otherwise, the Firm's proxy voting policies are as follows:

a. The Firm votes **FOR** a proposal when it believes that the proposal serves the best interests of the Discretionary Account whose proxy is solicited because, on balance, the following factors predominate:

- (i) If adopted, the proposal would have a positive economic effect on shareholder value;
- (ii) If adopted, the proposal would pose no threat to existing rights of shareholders;

(iii) The dilution, if any, of existing shares that would result from adoption of the proposal is warranted by the benefits of the proposal; and

(iv) If adopted, the proposal would not limit or impair the accountability of management and the board of directors to shareholders.

b. The Firm votes **AGAINST** a proposal if it believes that, on balance, the following factors predominate:

(i) If adopted, the proposal would have an adverse economic effect on shareholder value;

(ii) If adopted, the proposal would limit the rights of shareholders in a manner or to an extent that is not warranted by the benefits of adoption of the proposal;

(iii) If adopted, the proposal would cause significant dilution of shares that is not warranted by the benefits of the proposal;

(iv) If adopted, the proposal would limit or impair accountability of management or the board of directors to shareholders; or

(v) The proposal is a shareholder initiative that the Firm believes wastes time and resources of the company or reflects the grievance of one individual.

c. The Firm abstains from voting proxies when it believes that it is appropriate. Usually, this occurs when the Firm believes that a proposal holds negative but nonquantifiable implications for shareholder value but may express a legitimate concern.

3. Conflicts of Interest. Due to the size and nature of the Firm's operations and the Firm's limited affiliations in the securities industry, the Firm does not expect that material conflicts of interest will arise between the Firm and a Discretionary Account over proxy voting. The Firm recognizes, however, that such conflicts may arise from time to time, such as, for example, when the Firm or one of its affiliates has a business arrangement that could be affected by the outcome of a proxy vote or has a personal or business relationship with a person seeking appointment or re-appointment as a director of a company. If a material conflict of interest arises, the Firm will vote all proxies in accordance with Section VII.B.2. The Firm will not place its own interests ahead of the interests of its Discretionary Accounts in voting proxies.

If the Firm determines that the proxy voting policies in Section VII.B.2 do not adequately address a material conflict of interest related to a proxy, it will provide the affected Client Account with copies of all proxy solicitation materials that the Firm receives with respect to that proxy, notify that Client Account of the actual or potential conflict of interest and of the Firm's intended response to the proxy request (which response will be in accordance with the policies set forth in Section VII.B.2), and request that the Client Account consent to the Firm's intended response. If the Client Account consents to the Firm's intended response or fails to respond to the notice within a reasonable period of time specified in the notice, the Firm will vote the proxy as described in the notice. If the Client Account objects to the intended response, the Firm will vote the proxy as directed by the Client Account.

4. Shareholder Proposals by the Firm. The Firm will submit a shareholder proposal on behalf of any Discretionary Account only at the request of the Discretionary Account or with the Discretionary Account's prior written consent. The Firm will vote any shares in a Discretionary Account on behalf of a proposal submitted by the Firm in accordance with the above provisions of this Section VII.B.2, unless otherwise directed by the Discretionary Account.

5. Disclosures to Clients. The Firm includes in Part 2A of its Form ADV (1) a summary of these policies and procedures relating to proxy voting, (2) an offer to provide a copy of such policies and procedures to clients on request, and (3) information concerning how a client may obtain a report summarizing how the Firm voted proxies on behalf of such client. At the request of a Client Account, the Firm provides that Client Account with a copy of this Section VII and a report summarizing all proxy solicitations the Firm received with respect to that Client Account during the period requested and action taken by the Firm on each such proxy.

C. **Non-Discretionary Accounts.**

The Firm promptly forwards any proxy solicitation materials concerning securities held in a Non-Discretionary Account that the Firm receives to the appropriate Client Account. The Firm votes any such proxy as directed by that Client Account. At a Client Account's request, the Firm may, but is not obligated to, advise that Client Account with respect to voting any proxy. The Firm does not provide advice concerning the voting of any proxy to any Client Account unless such advice is first approved by the CCO.
